

Search Spell Correction Manual

Welcome to the Search Spell Correction Guide!

Our **Search Spell Correction** extension is a simple, yet powerful component that will allow you to correct all misspells, that customers can do in queries.

First, please find your extension in your account in [My Downloadable Products](#) section, then proceed with the [Installation](#). It is best to follow our step-by-step guide to configure the best search results.

Go ahead, dive in!

Our extension works out-of-the-box, so after installation, you need just to tune-up its [settings](#) for more effective work.

This should be a good beginning!

Extension installation

1. Backup your store's database and web directory.
2. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.
3. Copy the installation instructions from the page [My Downloadable Products](#) to the SSH console and press ENTER.
4. Run command `php -f bin/magento module:enable Mirasvit_Core Mirasvit_Misspell` to enable the extension.
5. Run command `php -f bin/magento setup:upgrade` to install the extension.
6. Run command `php -f bin/magento cache:clean` to clean the cache.
7. Deploy static view files

```
rm -rf pub/static/frontend/*; rm -rf pub/static/backend/*; rm -rf var/view_preprocessed/*; php -f bin/magento setup:static-content:deploy
```

8. Run command `php -f bin/magento indexer:reindex mst_misspell` to reindex the extension index.

Extension installation

1. Backup your store's database and web directory.
2. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.

3. Copy the installation instructions from the page [My Downloadable Products](#) to the SSH console and press ENTER.
4. Run command `php -f bin/magento module:enable Mirasvit_Core Mirasvit_Misspell` to enable the extension.
5. Run command `php -f bin/magento setup:upgrade` to install the extension.
6. Run command `php -f bin/magento cache:clean` to clean the cache.
7. Deploy static view files

```
rm -rf pub/static/frontend/*; rm -rf pub/static/backend/*; rm -rf var/view_preprocessed/*; php -f bin/magento setup:static-content:deploy
```
8. Run command `php -f bin/magento indexer:reindex mst_misspell` to reindex the extension index.

Configure Search Spell Correction

All configuration options are located at **Store -> Configuration -> Mirasvit Extensions -> Search Spell Correction** section.

There are only two options for now. In both, our extension analyzes a customer's request and tries to find products whose names are most close to the original request.

- **Enable spell correction** - enables automatic spelling correction.

Example

Let's assume that your store has '*Samsung*' products in the catalog.

When customer accidentally misspells *Samsang* phone, default Magento search will return nothing, since you have no such a product.

But with this option enabled, the customer will be notified about potential misspelling and will see the results for the corrected search phrase *Samsung* phone.

- **Enable fallback search** - enables searching for partial request satisfaction, when there are no results for the original request.

Example

Let's assume that customer puts a phrase *red samsung* phone to the search, but you have only *samsung* phone product.

If the store has no such a product, the default Magento search also will return nothing.

But with this option enabled, the customer will be notified about the error, and will receive results by the correct search phrase *samsung* phone.

Upgrade the Extension

To upgrade the extension, follow these steps:

1. Backup your store's database and web directory.
2. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.
3. Run command `composer require mirasvit/module-misspell:* --update-with-dependencies` to update current extension with all dependencies.

Note

In some cases, the command above is not applicable, or it's not possible to update just the current module, or you need to upgrade all Mirasvit modules in a bundle. In this case, the command above will have no effect.

Run instead `composer update mirasvit/*` command. It will update all Mirasvit modules installed in your store.

4. Run command `php -f bin/magento setup:upgrade` to install the updates.
5. Run command `php -f bin/magento cache:clean` to clean the cache.
6. Deploy static view files

```
rm -rf pub/static/frontend/*; rm -rf pub/static/backend/*; rm -rf var/view_preprocessed/*; php -f bin/magento setup:static-content:deploy
```

Disabling the Extension

Temporarily Disable

To temporarily disable the extension please follow these steps:

1. Login to the SSH console on your server and navigate to the root directory of the Magento 2 store.
2. Run command `php -f bin/magento module:disable Mirasvit_Misspell` to disable the extension.
3. Log in to the Magento backend and refresh the store cache (if enabled).

Remove the Extension

To uninstall the extension, please follow these steps:

1. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.
2. Run command `composer remove mirasvit/module-misspell` to remove the extension.
3. Run command `php -f bin/magento setup:upgrade`.

4. Completely clear the store cache.

Go to **System > Cache Management**. Click the button **Flush Magento Cache**. *If you want to clear the cache manually, remove the folder `var/cache` on the server.*

Change Log

1.0.40

(2021-12-14)

Fixed

- wrong event blocking advanced search
-

1.0.39

(2021-06-30)

Improvements
