Layered Navigation Manual

Welcome to the Layered Navigation User Manual

Layered Navigation is a powerful yet simple extension, which allows you to build your own layered menu, making catalog navigation and filtering more convenient.

It replaces the standard Magento layered navigation widget, displayed on each category page, with a more complex one - allowing customers to dynamically combine filters and browse desired products more quickly.

Go ahead, dive in!

Firstly, please find our extension in the My Downloadable Products section of our store. Learn how to install extension.

Proceed then with Quick Start, which will guide you to build your very own custom layered navigation menu.

How to install the extension

Prepare for installation

1. Back up your store's database and web directory.

2. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.

3. Copy the installation instructions from the page My Downloadable Products to the SSH console and press ENTER.

Install the extension via composer

1. Run the command below to enable the extension:

```
php -f bin/magento module:enable Mirasvit_Core Mirasvit_SeoFilter Miras
```

Note

If you are using Magento LiveSearch, additionally run:

```
php -f bin/magento module:enable Mirasvit_LayeredNavigationLiveSearch
```

2. Run the command below to install the extension:

```
php -f bin/magento setup:upgrade
```

3. Run the command below to clean the cache:

```
php -f bin/magento cache:clean
```

4. Deploy the static view files

```
rm -rf pub/static/*; rm -rf var/view_preprocessed/*;
php -f bin/magento setup:static-content:deploy
```

Install the extension for Hyva

1. Run the command

```
composer require mirasvit/module-navigation-hyva:*
```

2. Enable installed Hyva modules:

```
bin/magento module:enable Hyva_MirasvitLayeredNavigation Hyva_MirasvitA
```

3. Update Magento database schema and data with the command:

```
bin/magento setup:upgrade
```

4. Compile the code of the installed extension:

```
bin/magento setup:di:compile
```

5. Compile the code of the installed extension:

```
cd /path/to/theme/web/tailwind/

npm run build-prod
```

6. Deploy the static view files

```
   cd /path/to/project/

rm -rf pub/static/*; rm -rf var/view_preprocessed/*;
php -f bin/magento setup:static-content:deploy
```

7. Run the command below to clean the cache:

```
bin/magento cache:flush
```

Quick Start

Layered Navigation is a straightforward extension which replaces standard catalog filters immediately after installation. Basically, it's ready to work right out of the box.

However, there are certain elements which are worth your while to get tuned-up.

1. Layered Navigation needs to be seamlessly integrated to your theme. Visit the **General** and **Highlight** section of Configuration, and fit the layered navigation to your theme.

   Note

   Do not forget to clean cache **after applying any change**.
2. Review the attributes of your products, and set those that you wish to be added to Layered Navigation as **Filterable** .
3. Some attributes can have too many options to select. To optimize your navigation, use **Links Limit**.
4. You may wish to make navigation more attractive by changing your selection of widgets to images. Use **Widget Override** feature for that.
5. Configure additional filters, such as **New Arrivals** or **On Stock** using the **Additional Filters** section of configuration.
6. You can also make links in Layered Navigation Widgets more SEO-friendly, which will help web-crawlers index your store more effectively.

This should be a good start. Refer to corresponding sections of this manual to know more.

Layered Navigation Settings

This section describes most settings that you can use when configuring your layered navigation.

It is located in the **Stores -> Configuration -> Mirasvit Extensions -> Layered Navigation** section, and breaks into the following subsections which you can see at the sidebar:

Note

After changing of any option described below, navigate to **System -> Tools -> Cache Management** and **clear ALL cache** to apply the CSS changes which correspond to changed options.

General

This section contains the most basic options that define the behavior of Layered Navigation.

Option	Description
Enabled Ajax	Allows to update filters and catalog list via AJAX
Filters Applying Mode	Defines how filter will be applied. There are two available modes: **Instantly** (the filter is applied immediately after click), **By button click**.
Options Counts Precalculation	Allows you to calculate filter options counts after option selection in **By button click** mode.
Scroll To Top After Filters Applied	Allows you to scroll page to top after filter applied.

Option	Description
Enabled Multiselect	Allows you to select multiple filter options simultaneously, creating flexible and complex filters.
Show Opened Filters	If this option is set to **Yes**, opened filters will be displayed at the top of the filtered product list.
Limit for opened filters	The number of filters which can be opened by default. For allowing all filters to be opened, leave this field empty. Active filters are always opened.
Hide Unuseful Filter Option	If this option is set to **Yes**, filter option will be hidden if this option matches all products in current category.
Sticky Sidebar	Allows you to stick sidebar when product list is scrolling.

Back to Top

Styling

Option	Description
Filter item Display Mode	Defines widget, which will be used for filter option selection. There are four available widgets: **Default (link)** (used default widget, defined in your theme), **Simple Checkbox**, **Checkbox**, and **Circle**. These widgets will be used for all properties with enumerated values. **Note** You can override this option and define custom icons for each enumerated value using **Attribute Navigation Images**.
Checkbox or circle background color	Displayed when **Checkbox** or **Circle** options are selected in the previous setting. Defines a background of the checkbox or circle.
Checkbox or circle border color	Displayed when **Checkbox** or **Circle** options are selected in the **Display options** setting. Defines a border color of the checkbox or circle.
Checkbox or circle checked color	Displayed when **Checkbox** or **Circle** options are selected in the master **Display options** setting. Defines a selection color of the checkbox or circle.
Slider main color	Defines the color of the slider inside the values range
Slider secondary color	Defines the color of the slider outside the values range
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting
Additional CSS	Allows adding custom CSS code for styling filters. **Note** To avoid unexpected changes in styles CSS selectors should start with the selector of the parent block of the navigation bar e.g. .sidebar-main or .block.filter (depending on the theme)

Back to Top

Links Limit

Option	Description
Display Mode	Defines how options will be displayed. There are three available widgets: **Disabled (no limits)** (widget used by default as defined in your theme), **Scroll box**, and **Show/hide link**.
Scroll height (px)	Displayed when **Scroll box** option is selected in the previous setting. Defines the height of the scroll box.
Links limit	Displayed when **Show/hide link** option is selected in the previous setting. Show only specified amount links for filters, integer value.
Limit for alphabetical index	Show alphabetical index only if the number of visible options higher than limit. Set 0 or leave this option empty to always display alphabetical index.
Less text	Displayed when a **Show/hide link** option is selected in the previous setting. Text which will be used as a button to collapse the filter to a limited quantity of options.
More text	Displayed when a **Show/hide link** option is selected in the previous setting. Text, which will be used as a button to expand the filter to the full quantity of options.

Back to Top

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar

Option	Description
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Back to Top

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: **Default** (within sidebar) and **Horizontal**
Group options by attribute	Defines how selected filters should be grouped.

Back to Top

SEO

Option	Description
Robots meta header for pages with applied filters	This directive controls page visibility by search engine crawlers. It's recommended to use the **NOINDEX, NOFOLLOW** option to avoid indexation of duplicate content by search engines like Google unless you use friendly URLs.

Option	Description
Canonical link for pages with applied filters	Defines the "preferred" version for current page. Helps to prevent duplicate content issues. **Options:** - **Current Url** - always uses the same URL as in the browser's address panel. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html?activity=5174"* - **URL without applied filters and GET parameters** - canonical URL always points to a genuine page URL, removing applied filters (even with friendly URLs) and GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica.html"* - **URL without GET parameters** - canonical URL points to the URL specified in the browser's address panel, but without GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html"*

Back to Top

Product Attribute Linking

Option	Description
Enabled	If enabled, for each filterable attribute value on the product view page the extension will generate the link with the filter by that attribute Target	Defines whenewer the attribute link should be opened in the same tab or in the new one

Back to Top

Layered Navigation Settings

This section describes most settings that you can use when configuring your layered navigation.

It is located in the **Stores -> Configuration -> Mirasvit Extensions -> Layered Navigation** section, and breaks into the following subsections which you can see at the sidebar:

Note

After changing of any option described below, navigate to **System -> Tools -> Cache Management** and **clear ALL cache** to apply the CSS changes which correspond to changed options.

General

This section contains the most basic options that define the behavior of Layered Navigation.

Option	Description
Enabled Ajax	Allows to update filters and catalog list via AJAX
Filters Applying Mode	Defines how filter will be applied. There are two available modes: **Instantly** (the filter is applied immediately after click), **By button click**.
Options Counts Precalculation	Allows you to calculate filter options counts after option selection in **By button click** mode.
Scroll To Top After Filters Applied	Allows you to scroll page to top after filter applied.
Enabled Multiselect	Allows you to select multiple filter options simultaneously, creating flexible and complex filters.
Show Opened Filters	If this option is set to **Yes**, opened filters will be displayed at the top of the filtered product list.
Limit for opened filters	The number of filters which can be opened by default. For allowing all filters to be opened, leave this field empty. Active filters are always opened.
Hide Unuseful Filter Option	If this option is set to **Yes**, filter option will be hidden if this option matches all products in current category.
Sticky Sidebar	Allows you to stick sidebar when product list is scrolling.

Styling

Option	Description
Filter item Display Mode	Defines widget, which will be used for filter option selection. There are four available widgets: **Default (link)** (used default widget, defined in your theme), **Simple Checkbox**, **Checkbox**, and **Circle**. These widgets will be used for all properties with enumerated values. **Note** You can override this option and define custom icons for each enumerated value using **Attribute Navigation Images**.
Checkbox or circle background color	Displayed when **Checkbox** or **Circle** options are selected in the previous setting. Defines a background of the checkbox or circle.
Checkbox or circle border color	Displayed when **Checkbox** or **Circle** options are selected in the **Display options** setting. Defines a border color of the checkbox or circle.

Option	Description
Checkbox or circle checked color	Displayed when **Checkbox** or **Circle** options are selected in the master **Display options** setting. Defines a selection color of the checkbox or circle.
Slider main color	Defines the color of the slider inside the values range
Slider secondary color	Defines the color of the slider outside the values range
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting
Additional CSS	Allows adding custom CSS code for styling filters. **Note** To avoid unexpected changes in styles CSS selectors should start with the selector of the parent block of the navigation bar e.g. .sidebar-main or .block.filter (depending on the theme)

Back to Top

Links Limit

Option	Description
Display Mode	Defines how options will be displayed. There are three available widgets: **Disabled (no limits)** (widget used by default as defined in your theme), **Scroll box**, and **Show/hide link**.
Scroll height (px)	Displayed when **Scroll box** option is selected in the previous setting. Defines the height of the scroll box.
Links limit	Displayed when **Show/hide link** option is selected in the previous setting. Show only specified amount links for filters, integer value.
Limit for alphabetical index	Show alphabetical index only if the number of visible options higher than limit. Set 0 or leave this option empty to always display alphabetical index.
Less text	Displayed when a **Show/hide link** option is selected in the previous setting. Text which will be used as a button to collapse the filter to a limited quantity of options.
More text	Displayed when a **Show/hide link** option is selected in the previous setting. Text, which will be used as a button to expand the filter to the full quantity of options.

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation

Option	Description
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Back to Top

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: **Default** (within sidebar) and **Horizontal**
Group options by attribute	Defines how selected filters should be grouped.

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation

Option	Description
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Styling

Option	Description
Filter item Display Mode	Defines widget, which will be used for filter option selection. There are four available widgets: **Default (link)** (used default widget, defined in your theme), **Simple Checkbox**, **Checkbox**, and **Circle**. These widgets will be used for all properties with enumerated values. **Note** You can override this option and define custom icons for each enumerated value using **Attribute Navigation Images**.
Checkbox or circle background color	Displayed when **Checkbox** or **Circle** options are selected in the previous setting. Defines a background of the checkbox or circle.
Checkbox or circle border color	Displayed when **Checkbox** or **Circle** options are selected in the **Display options** setting. Defines a border color of the checkbox or circle.
Checkbox or circle checked color	Displayed when **Checkbox** or **Circle** options are selected in the master **Display options** setting. Defines a selection color of the checkbox or circle.
Slider main color	Defines the color of the slider inside the values range
Slider secondary color	Defines the color of the slider outside the values range
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting
Additional CSS	Allows adding custom CSS code for styling filters. **Note** To avoid unexpected changes in styles CSS selectors should start with the selector of the parent block of the navigation bar e.g. .sidebar-main or .block.filter (depending on the theme)

Links Limit

Option	Description
Display Mode	Defines how options will be displayed. There are three available widgets: **Disabled (no limits)** (widget used by default as defined in your theme), **Scroll box**, and **Show/hide link**.
Scroll height (px)	Displayed when **Scroll box** option is selected in the previous setting. Defines the height of the scroll box.
Links limit	Displayed when **Show/hide link** option is selected in the previous setting. Show only specified amount links for filters, integer value.
Limit for alphabetical index	Show alphabetical index only if the number of visible options higher than limit. Set 0 or leave this option empty to always display alphabetical index.
Less text	Displayed when a **Show/hide link** option is selected in the previous setting. Text which will be used as a button to collapse the filter to a limited quantity of options.
More text	Displayed when a **Show/hide link** option is selected in the previous setting. Text, which will be used as a button to expand the filter to the full quantity of options.

Back to Top

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Back to Top

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: **Default** (within sidebar) and **Horizontal**
Group options by attribute	Defines how selected filters should be grouped.

Back to Top

SEO

Option	Description
Robots meta header for pages with applied filters	This directive controls page visibility by search engine crawlers. It's recommended to use the **NOINDEX, NOFOLLOW** option to avoid indexation of duplicate content by search engines like Google unless you use friendly URLs.
Canonical link for pages with applied filters	Defines the "preferred" version for current page. Helps to prevent duplicate content issues. **Options:** - **Current Url** - always uses the same URL as in the browser's address panel. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html?activity=5174"* - **URL without applied filters and GET parameters** - canonical URL always points to a genuine page URL, removing applied filters (even with friendly URLs) and GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica.html"* - **URL without GET parameters** - canonical URL points to the URL specified in the browser's address panel, but without GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html"*

Back to Top

Product Attribute Linking

Option	Description
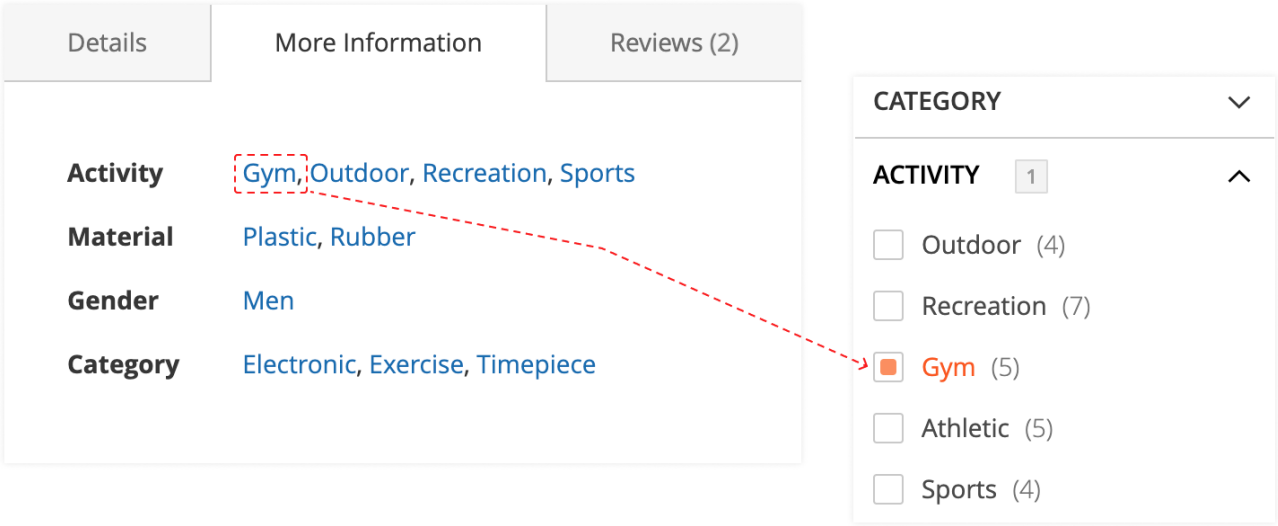
Enabled	If enabled, for each filterable attribute value on the product view page the extension will generate the link with the filter by that attribute



Target	Defines whenever the attribute link should be opened in the same tab or in the new one

Back to Top

Layered Navigation Settings

This section describes most settings that you can use when configuring your layered navigation.

It is located in the **Stores -> Configuration -> Mirasvit Extensions -> Layered Navigation** section, and breaks into the following subsections which you can see at the sidebar:

Note

After changing of any option described below, navigate to **System -> Tools -> Cache Management** and **clear ALL cache** to apply the CSS changes which correspond to changed options.

General

This section contains the most basic options that define the behavior of Layered Navigation.

Option	Description
Enabled Ajax	Allows to update filters and catalog list via AJAX
Filters Applying Mode	Defines how filter will be applied. There are two available modes: **Instantly** (the filter is applied immediately after click), **By button click**.

Option	Description
Options Counts Precalculation	Allows you to calculate filter options counts after option selection in **By button click** mode.
Scroll To Top After Filters Applied	Allows you to scroll page to top after filter applied.
Enabled Multiselect	Allows you to select multiple filter options simultaneously, creating flexible and complex filters.
Show Opened Filters	If this option is set to **Yes**, opened filters will be displayed at the top of the filtered product list.
Limit for opened filters	The number of filters which can be opened by default. For allowing all filters to be opened, leave this field empty. Active filters are always opened.
Hide Unuseful Filter Option	If this option is set to **Yes**, filter option will be hidden if this option matches all products in current category.
Sticky Sidebar	Allows you to stick sidebar when product list is scrolling.

Back to Top

Styling

Option	Description
Filter item Display Mode	Defines widget, which will be used for filter option selection. There are four available widgets: **Default (link)** (used default widget, defined in your theme), **Simple Checkbox**, **Checkbox**, and **Circle**. These widgets will be used for all properties with enumerated values. **Note** You can override this option and define custom icons for each enumerated value using **Attribute Navigation Images**.
Checkbox or circle background color	Displayed when **Checkbox** or **Circle** options are selected in the previous setting. Defines a background of the checkbox or circle.
Checkbox or circle border color	Displayed when **Checkbox** or **Circle** options are selected in the **Display options** setting. Defines a border color of the checkbox or circle.
Checkbox or circle checked color	Displayed when **Checkbox** or **Circle** options are selected in the master **Display options** setting. Defines a selection color of the checkbox or circle.
Slider main color	Defines the color of the slider inside the values range
Slider secondary color	Defines the color of the slider outside the values range
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting

Option	Description
Additional CSS	Allows adding custom CSS code for styling filters. **Note** To avoid unexpected changes in styles CSS selectors should start with the selector of the parent block of the navigation bar e.g. .sidebar-main or .block.filter (depending on the theme)

Back to Top

Links Limit

Option	Description
Display Mode	Defines how options will be displayed. There are three available widgets: **Disabled (no limits)** (widget used by default as defined in your theme), **Scroll box**, and **Show/hide link**.
Scroll height (px)	Displayed when **Scroll box** option is selected in the previous setting. Defines the height of the scroll box.
Links limit	Displayed when **Show/hide link** option is selected in the previous setting. Show only specified amount links for filters, integer value.
Limit for alphabetical index	Show alphabetical index only if the number of visible options higher than limit. Set 0 or leave this option empty to always display alphabetical index.
Less text	Displayed when a **Show/hide link** option is selected in the previous setting. Text which will be used as a button to collapse the filter to a limited quantity of options.
More text	Displayed when a **Show/hide link** option is selected in the previous setting. Text, which will be used as a button to expand the filter to the full quantity of options.

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.

Option	Description
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Back to Top

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: **Default** (within sidebar) and **Horizontal**
Group options by attribute	Defines how selected filters should be grouped.

SEO

Option	Description

Robots meta header for pages with applied filters	This directive controls page visibility by search engine crawlers. It's recommended to use the **NOINDEX, NOFOLLOW** option to avoid indexation of duplicate content by search engines like Google unless you use friendly URLs.
Canonical link for pages with applied filters	Defines the "preferred" version for current page. Helps to prevent duplicate content issues. **Options:** - **Current Url** - always uses the same URL as in the browser's address panel. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html?activity=5174"* - **URL without applied filters and GET parameters** - canonical URL always points to a genuine page URL, removing applied filters (even with friendly URLs) and GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica.html"* - **URL without GET parameters** - canonical URL points to the URL specified in the browser's address panel, but without GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html"*

Back to Top

Product Attribute Linking

Option	Description
Enabled	If enabled, for each filterable attribute value on the product view page the extension will generate the link with the filter by that attribute Target	Defines whenewer the attribute link should be opened in the same tab or in the new one

Back to Top

Layered Navigation Settings

This section describes most settings that you can use when configuring your layered navigation.

It is located in the **Stores -> Configuration -> Mirasvit Extensions -> Layered Navigation** section, and breaks into the following subsections which you can see at the sidebar:

Note

After changing of any option described below, navigate to **System -> Tools -> Cache Management** and **clear ALL cache** to apply the CSS changes which correspond to changed options.

General

This section contains the most basic options that define the behavior of Layered Navigation.

Option	Description
Enabled Ajax	Allows to update filters and catalog list via AJAX
Filters Applying Mode	Defines how filter will be applied. There are two available modes: **Instantly** (the filter is applied immediately after click), **By button click**.
Options Counts Precalculation	Allows you to calculate filter options counts after option selection in **By button click** mode.
Scroll To Top After Filters Applied	Allows you to scroll page to top after filter applied.
Enabled Multiselect	Allows you to select multiple filter options simultaneously, creating flexible and complex filters.
Show Opened Filters	If this option is set to **Yes**, opened filters will be displayed at the top of the filtered product list.
Limit for opened filters	The number of filters which can be opened by default. For allowing all filters to be opened, leave this field empty. Active filters are always opened.
Hide Unuseful Filter Option	If this option is set to **Yes**, filter option will be hidden if this option matches all products in current category.
Sticky Sidebar	Allows you to stick sidebar when product list is scrolling.

Back to Top

Styling

Option	Description
Filter item Display Mode	Defines widget, which will be used for filter option selection. There are four available widgets: **Default (link)** (used default widget, defined in your theme), **Simple Checkbox**, **Checkbox**, and **Circle**. These widgets will be used for all properties with enumerated values. **Note** You can override this option and define custom icons for each enumerated value using **Attribute Navigation Images**.

Option	Description
Checkbox or circle background color	Displayed when **Checkbox** or **Circle** options are selected in the previous setting. Defines a background of the checkbox or circle.
Checkbox or circle border color	Displayed when **Checkbox** or **Circle** options are selected in the **Display options** setting. Defines a border color of the checkbox or circle.
Checkbox or circle checked color	Displayed when **Checkbox** or **Circle** options are selected in the master **Display options** setting. Defines a selection color of the checkbox or circle.
Slider main color	Defines the color of the slider inside the values range
Slider secondary color	Defines the color of the slider outside the values range
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting
Additional CSS	Allows adding custom CSS code for styling filters. **Note** To avoid unexpected changes in styles CSS selectors should start with the selector of the parent block of the navigation bar e.g. .sidebar-main or .block.filter (depending on the theme)

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Back to Top

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: **Default** (within sidebar) and **Horizontal**
Group options by attribute	Defines how selected filters should be grouped.

SEO

Option	Description
Robots meta header for pages with applied filters	This directive controls page visibility by search engine crawlers. It's recommended to use the **NOINDEX, NOFOLLOW** option to avoid indexation of duplicate content by search engines like Google unless you use friendly URLs.
Canonical link for pages with applied filters	Defines the "preferred" version for current page. Helps to prevent duplicate content issues. **Options:** - **Current Url** - always uses the same URL as in the browser's address panel. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html?activity=5174"* - **URL without applied filters and GET parameters** - canonical URL always points to a genuine page URL, removing applied filters (even with friendly URLs) and GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica.html"* - **URL without GET parameters** - canonical URL points to the URL specified in the browser's address panel, but without GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html"*

Product Attribute Linking

Option	Description
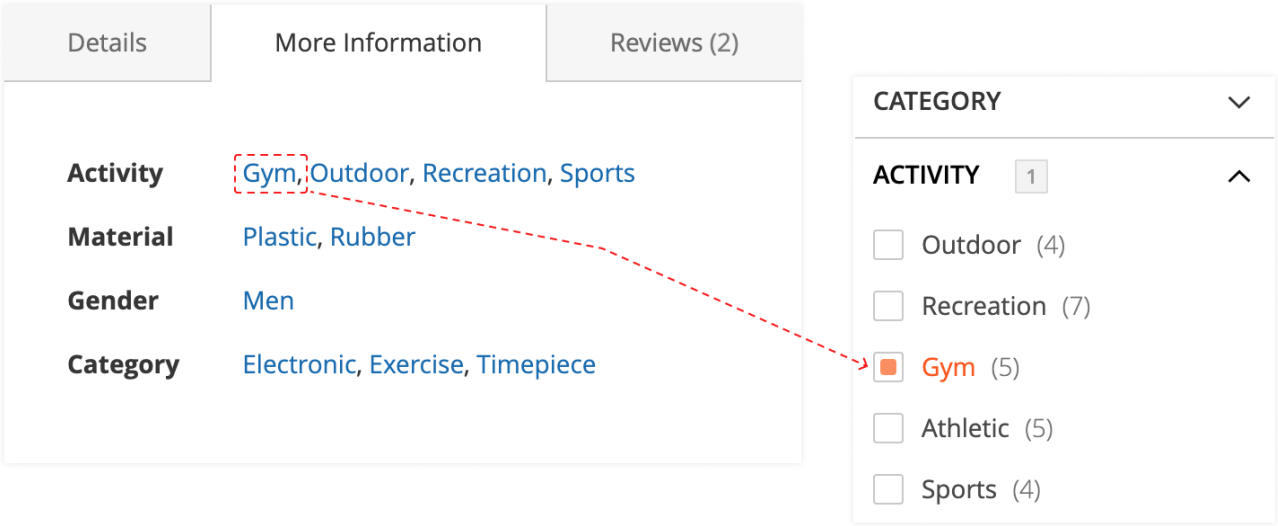
Enabled	If enabled, for each filterable attribute value on the product view page the extension will generate the link with the filter by that attribute



Target	Defines whenever the attribute link should be opened in the same tab or in the new one

Back to Top

Layered Navigation Settings

This section describes most settings that you can use when configuring your layered navigation.

It is located in the **Stores -> Configuration -> Mirasvit Extensions -> Layered Navigation** section, and breaks into the following subsections which you can see at the sidebar:

Note

After changing of any option described below, navigate to **System -> Tools -> Cache Management** and **clear ALL cache** to apply the CSS changes which correspond to changed options.

General

This section contains the most basic options that define the behavior of Layered Navigation.

Option	Description
Enabled Ajax	Allows to update filters and catalog list via AJAX
Filters Applying Mode	Defines how filter will be applied. There are two available modes: **Instantly** (the filter is applied immediately after click), **By button click**.

Option	Description
Options Counts Precalculation	Allows you to calculate filter options counts after option selection in **By button click** mode.
Scroll To Top After Filters Applied	Allows you to scroll page to top after filter applied.
Enabled Multiselect	Allows you to select multiple filter options simultaneously, creating flexible and complex filters.
Show Opened Filters	If this option is set to **Yes**, opened filters will be displayed at the top of the filtered product list.
Limit for opened filters	The number of filters which can be opened by default. For allowing all filters to be opened, leave this field empty. Active filters are always opened.
Hide Unuseful Filter Option	If this option is set to **Yes**, filter option will be hidden if this option matches all products in current category.
Sticky Sidebar	Allows you to stick sidebar when product list is scrolling.

Back to Top

Styling

Option	Description
Filter item Display Mode	Defines widget, which will be used for filter option selection. There are four available widgets: **Default (link)** (used default widget, defined in your theme), **Simple Checkbox**, **Checkbox**, and **Circle**. These widgets will be used for all properties with enumerated values. **Note** You can override this option and define custom icons for each enumerated value using **Attribute Navigation Images**.
Checkbox or circle background color	Displayed when **Checkbox** or **Circle** options are selected in the previous setting. Defines a background of the checkbox or circle.
Checkbox or circle border color	Displayed when **Checkbox** or **Circle** options are selected in the **Display options** setting. Defines a border color of the checkbox or circle.
Checkbox or circle checked color	Displayed when **Checkbox** or **Circle** options are selected in the master **Display options** setting. Defines a selection color of the checkbox or circle.
Slider main color	Defines the color of the slider inside the values range
Slider secondary color	Defines the color of the slider outside the values range
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting

Option	Description
Additional CSS	Allows adding custom CSS code for styling filters. **Note** To avoid unexpected changes in styles CSS selectors should start with the selector of the parent block of the navigation bar e.g. .sidebar-main or .block.filter (depending on the theme)

Back to Top

Links Limit

Option	Description
Display Mode	Defines how options will be displayed. There are three available widgets: **Disabled (no limits)** (widget used by default as defined in your theme), **Scroll box**, and **Show/hide link**.
Scroll height (px)	Displayed when **Scroll box** option is selected in the previous setting. Defines the height of the scroll box.
Links limit	Displayed when **Show/hide link** option is selected in the previous setting. Show only specified amount links for filters, integer value.
Limit for alphabetical index	Show alphabetical index only if the number of visible options higher than limit. Set 0 or leave this option empty to always display alphabetical index.
Less text	Displayed when a **Show/hide link** option is selected in the previous setting. Text which will be used as a button to collapse the filter to a limited quantity of options.
More text	Displayed when a **Show/hide link** option is selected in the previous setting. Text, which will be used as a button to expand the filter to the full quantity of options.

Back to Top

Additional Filters

This section has 6 additional filters provided by our extension: **Category Filter**, **New Products**, **On Sale Stock**, **Rating** and **Search Filter**.

Category Filter

This is the default filter by category with additional settings.

Option	Description
Enabled	Allows you to use this filter in navigation
Show Nested Categories	If enabled, extension will show nested (subcategories) as a tree
Sort Options by	Defines the sorting order for categories layered navigation. Applicable **only** if **Show Nested Categories** is set to **No**.

Option	Description
Use Alphabetical Index	Allows you to use alphabetical index for category filter. Applicable **only** if **Show Nested Categories** is set to **No**. For more information reffer to Alphabeticat Index in Product Attributes Navigation Options.

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.
If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

Back to Top

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at **Stores -> Attributes -> Product**. To become a filter, the attribute should be enumerable, and the option **Use in Layered Navigation** should be enabled in **Storefront Properties**. Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

Back to Top

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: **Default** (within sidebar) and **Horizontal**
Group options by attribute	Defines how selected filters should be grouped.

Back to Top

SEO

Option	Description

Robots meta header for pages with applied filters	This directive controls page visibility by search engine crawlers. It's recommended to use the **NOINDEX, NOFOLLOW** option to avoid indexation of duplicate content by search engines like Google unless you use friendly URLs.
Canonical link for pages with applied filters	Defines the "preferred" version for current page. Helps to prevent duplicate content issues. **Options:** - **Current Url** - always uses the same URL as in the browser's address panel. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html?activity=5174"* - **URL without applied filters and GET parameters** - canonical URL always points to a genuine page URL, removing applied filters (even with friendly URLs) and GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica.html"* - **URL without GET parameters** - canonical URL points to the URL specified in the browser's address panel, but without GET parameters. For example: *Address URL: "http://example.com/veronica/red.html?activity=5174"* *Canonical URL: "http://example.com/veronica/red.html"*

Back to Top

Product Attribute Linking

Option	Description
Enabled	If enabled, for each filterable attribute value on the product view page the extension will generate the link with the filter by that attribute Target	Defines whenewer the attribute link should be opened in the same tab or in the new one

Back to Top

Brand Settings

This section describes most settings that you can use for configuring your brands.

All of them located at **Stores -> Configuration -> Mirasvit Extensions -> Brand** section.

General

This section has the most basic options which define the behavior of Brands.

Option	Description
Brand Attribute	Defines the brand's attribute.
All Brands URL	Defines URL for the brand's page.
Brand page URL	Defines how URL will be displayed. There are two available options: **Long URL** like `/brand/apple/` or **Short URL** like `/apple/`

Ajax Infinite Scroll

The scroll module provides you with the ability to activate the infinite scroll for traversing your catalog.
It works in 2 modes:

1. **Automatic Infinite Scroll** automatically loads the next page when the user scrolls down to the bottom of the current page.
2. **Load More Button** triggers the next page load by hitting the **Load More** button.

General Settings

Go to **Stores > Configuration > Mirasvit Extensions > Scroll** section.

- **Scroll Mode** - defines, the mode used for loading next pages:
  - **Disabled** - disable scroll functionality.
  - **Infinite scroll**
  - **Load More Button**
  - **Infinite scroll + Load More Button**
  - **Load More Button + Infinite scroll**
- **Load Previous Page Button Label** - if a user opens your site by a direct link which loads the specific category page (using param "p=page_num"), our module shows the **Load Previous Page** button on top of the catalog to give the user the ability to see the previous pages.
- **Load Next Page Button Label** - label for **Load More** button.
- **Pages limit for the first pagination mode type** - set the number of pages which will be loaded by the first pagination mode type. Available only for **Infinite scroll + Load More Button** and **Load More Button + Infinite scroll** scroll modes.
- **Product List Selector** - our extension uses this selector as the starting point for the initialization of the scroll functionality. The Default Magento block which wraps products has the `.products.products-grid` or `.products.products-list` selector (depends on current view mode). However, if your theme uses a custom selector, you should specify it here.

Ajax Infinite Scroll

The scroll module provides you with the ability to activate the infinite scroll for traversing your catalog.
It works in 2 modes:

1. **Automatic Infinite Scroll** automatically loads the next page when the user scrolls down to the bottom of the current page.
2. **Load More Button** triggers the next page load by hitting the **Load More** button.

General Settings

Go to **Stores > Configuration > Mirasvit Extensions > Scroll** section.

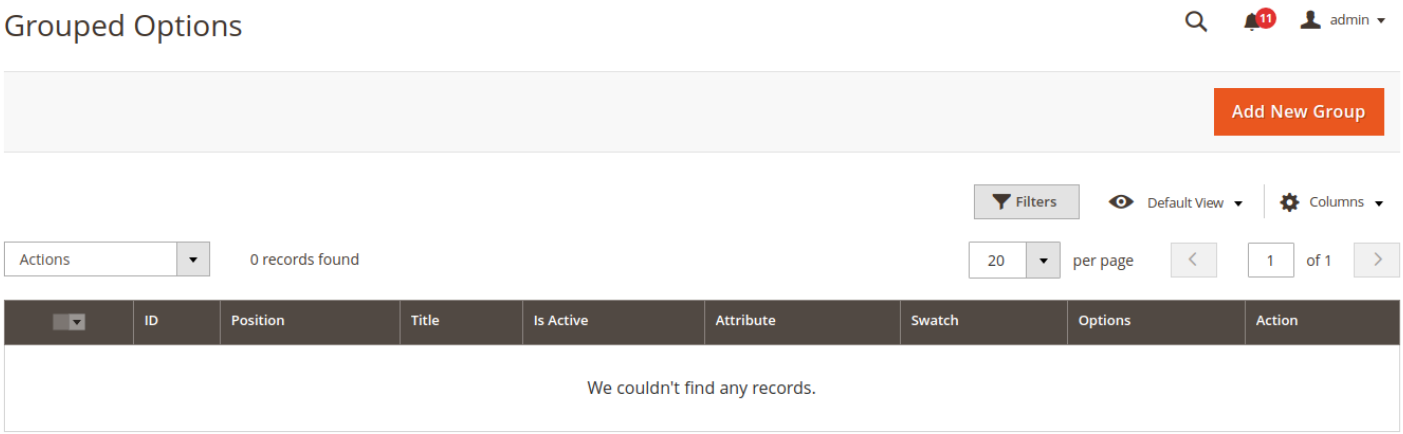
- **Scroll Mode** - defines, the mode used for loading next pages:
  - **Disabled** - disable scroll functionality.
  - **Infinite scroll**
  - **Load More Button**
  - **Infinite scroll + Load More Button**
  - **Load More Button + Infinite scroll**
- **Load Previous Page Button Label** - if a user opens your site by a direct link which loads the specific category page (using param "p=page_num"), our module shows the **Load Previous Page** button on top of the catalog to give the user the ability to see the previous pages.
- **Load Next Page Button Label** - label for **Load More** button.

- **Pages limit for the first pagination mode type** - set the number of pages which will be loaded by the first pagination mode type. Available only for **Infinite scroll + Load More Button** and **Load More Button + Infinite scroll** scroll modes.
- **Product List Selector** - our extension uses this selector as the starting point for the initialization of the scroll functionality. The Default Magento block which wraps products has the `.products.products-grid` or `.products.products-list` selector (depends on current view mode). However, if your theme uses a custom selector, you should specify it here.

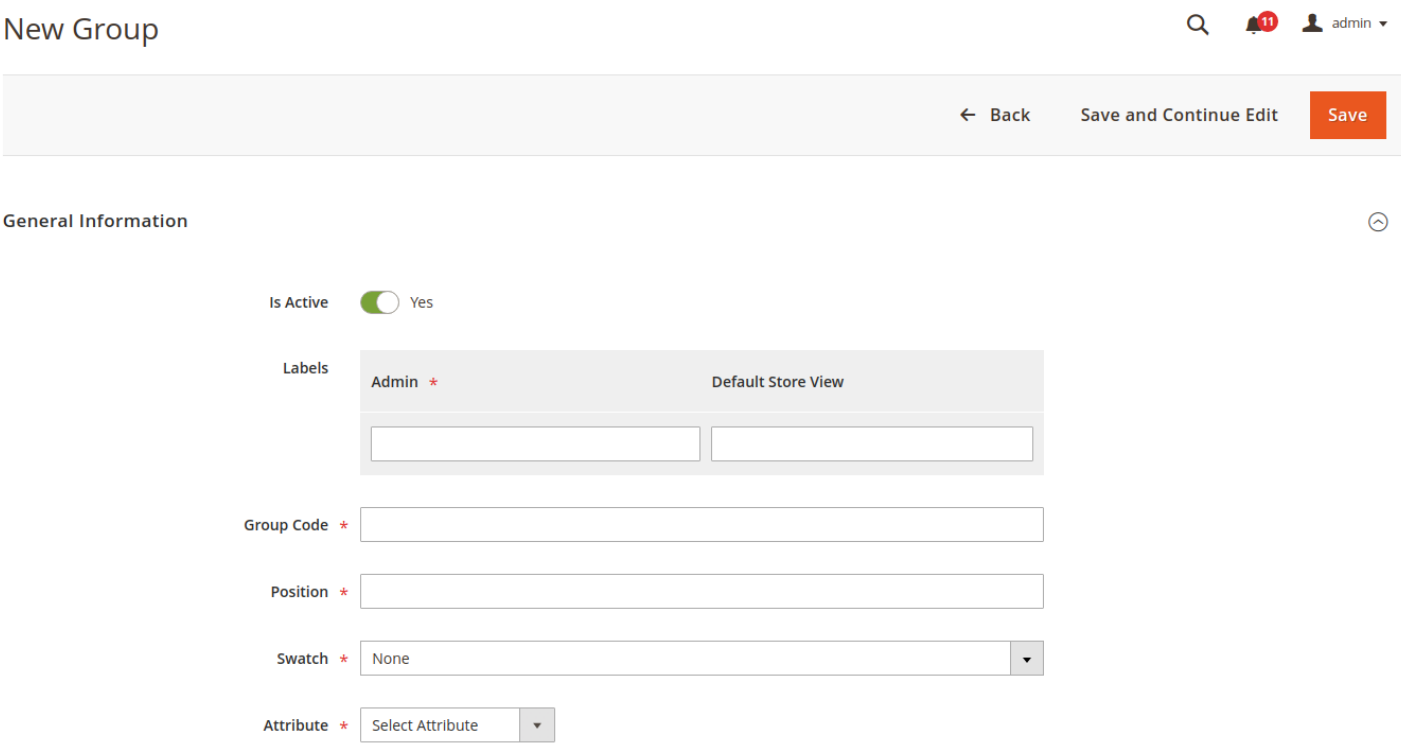
Configuring Grouped Options

This part of the Layered Navigation extension provides you with the ability to combine attribute options into one filter for layered navigation.

It is located on the **Content -> Layered Navigation -> Grouped Options** page.



To create a new group, press the **Add New Group** button and you'll be redirected to the Grouped Options creation page.



Field	Description
Is Active	Enable/disable current Grouped Options.
Labels	Defines a label for Grouped Options for each store. If the label for a particular store has not been set, the admin area label will be used for that store.
Group Code	A key for current Grouped Options that will be used as a value of the attribute The code should be unique among all Grouped Options.
Position	The position of the filter in the navigation bar on the frontend.
Swatch	Choose the swatch type of the grouped option. There are 3 possible swatch types provided: - None; - Color; - Image; Swatch will be used for grouped options only if the original attribute options have them.
Color	Select the color for the current Grouped Options which will be displayed on the frontend. This field is visible only for the Color swatch type.
File	Upload the image that will be used on the frontend in the navigation bar. This field is only visible for Image swatch type.
Attribute	Select the attribute from the dropdown whose options you'd like to combine in one filter.
Options	Choose options from the selected attribute to combine in one filter. This field only visible after the attribute is selected.

Press the **Save** button to save Grouped Options.

Once Grouped Options is created and active, the options combined in it will be replaced in the navigation bar with one grouped option on each category page even if only one of the combined options is present there.

Product Attributes Navigation Options

Our extension uses **SEO Filters** to define possible filters. The extension adds additional options to product attributes that are used to build Layered Navigation.

To adjust your attributes for Navigation, visit **Stores -> Attributes -> Product** and select an attribute.

Basic Navigation Options

They are located in the **Storefront Properties** subsection and are added to all attributes:

- **Use in Layered Navigation** - defines how current attributes should be used in Layered Navigation. There are three possible options:
  - **Filterable (with Results)** - defines which filter can be used in Navigation, and which results can be displayed and manipulated.
  - **Filterable (no Results)** - defines that filter can be used in Navigation, but results can not be manipulated.
  - **No** - attribute can not be used for Navigation.
- **Use in Search Results Layered Navigation** - our extension features additional filters, which can be applied to and combined with already filtered results. If this option is set to **Yes**, then this attribute can be combined.

  Note

  This option applies only to enumerable properties, like **Dropdown**, **Multiple Select**, **Price**, and so on.

Overriding Filter Options Display and Behaviour

Our extension allows you to adjust filter options display and behavior per attribute.
This can be done by using a special tab added to such attributes, called **Layered Navigation**.

If the property is enumerable and has a defined set of values, the display of each value can be customized.

There are three sections in this tab with different settings:

- **Appearance**
  - **Display Mode** - defines how filter options are displayed in the layered navigation on the storefront. Applicable **only** for attributes of a type **price**
  - **Value Template** - specifies the template for price format. Applicable **only** for attributes of a type **price**
  - **Show Search Box** - defines whether to display the search box for the filter. **Not** applicable for attributes of a type **price**
  - **Tooltip** - the tooltip text for the filter.
- **Visibility**
  - **Categories Visibility Mode** - defines whether the filter should be displayed/hidden in particular categories
- **Additional**
  - **Enable Multiselect** - overrides the multiselect setting from the general configurations per attribute

- **Multiselect Logic** - defines the multiselect logic (OR/AND) per attribute. Applicable **only** for attributes of a type **select** and **multiselect**. The default behavior is OR.
- **Sort Options by** - defines the sorting order for attribute options in layered navigation. Applicable **only** for attributes of a type **select** and **multiselect**.
- **Use Alphabetical Index** - Allows you to use alphabetical index for category filter. More information about this feature is below.

If the property is enumerable and has a defined set of values, the display of each value can be customized. For each possible value, there are four possible options:

Setting	Description
Option	name of possible value (**read-only** property).
Images	this is the image to be used instead of the widget, defined in the **Display options** setting in the **General** section.
Label	a label to be used instead of the default name, shown in the **Option** field.
Whole width image	defines whether the image should be displayed as is (**selected**) or shrunk to standard proportions (**deselected**).

By combining these definitions, you can completely override your filter display on the sidebar and create a more attractive appearance.

Alphabetical index

This feature provides you with the ability to filter attribute options by the first letter of their label. The alphabetical index will appear only if the number of options in the filter is equal or higher than the limit for alphabetical index configured in the extension.

If this option is enabled for a filter it will look like here:

CLIMATE

A C I M R S W

- [ ] All-Weather (8)
- [ ] Cold (4)
- [ ] Cool (17)
- [ ] Indoor (35)
- [ ] Mild (16)
- [ ] Rainy (2)
- [ ] Spring (21)
- [ ] Warm (28)
- [ ] Windy (8)

If for this attribute the **Sort Options by** is set to **Labet (alphabeticaly)** the options of the attribute will be grouped by the first letter like here:

CLIMATE

A C I M R S W

A

- [ ] All-Weather (8)

C

- [ ] Cold (4)
- [ ] Cool (17)

I

- [ ] Indoor (35)

M

- [ ] Mild (16)

R

Manage Brand

This section describes how to create and edit brand pages.

To create a new brand page, go to the **Content -> Brands -> Brand Pages** section and press the button **Add Brand**. The brand page that will appear is divided into six sections:

General Information

Option	Description
Is Active	has the ability to enable / disable brand.
URL key	Defines URL for your brand page. If the field is empty, the value will be created automatically.
Brand	Choose the existing brand or create a new one by clicking the button **Add New Brand**. The brand attribute should be defined in the **Stores -> Configuration -> Mirasvit Extensions -> Brand -> General -> Brand Attribute**.
URL key	Defines URL for your brand page. If the field is empty, the value will be created automatically.
Logo	Defines image for the brand logo. The permitted file types: png, gif, jpg, jpeg, svg.
Title	Defines brand title. If the field is empty, the value will be created automatically from the Brand field.
Description	Defines brand description.
Visible in Store View	Defines where the brand page will be displayed.

Back to Top

Content

This section allows configuring the content of the brand page and defining how it should be displayed.
The Content section has a main config block **Default (Admin)** and additional blocks for each Store View the brand page is configured to be displayed in. Each config block has the following fields:

Option	Description
Title	Defines brand title. If the field is empty, the value will be created automatically from the Brand field.
Description	Defines brand description.
Short Description	Defines a short description. It can be used in tooltip (STORES > Configuration > Brand > Brand Logo and Tooltip > Product List Brand Logo Tooltip).
Display mode	Defines how the brand page should be displayed. It has 3 options: **Products only**, **Static block only**, **Static block and products**. If not selected the **Products only** display mode will be used.
CMS block	Defines a static block to display at the top of the brand page. Blocks should be added in **Content -> Elements -> Blocks**. Not applicable for the **Products only** display mode.

Search Engine Optimization

Option	Description
Meta Title	Defines the meta title for the brand page.
Meta Keywords	Defines meta keywords for the brand page.
Meta Description	Defines the meta description for the brand page.
SEO Description	Defines the seo description for the brand page.
SEO Description Position	Defines the position of seo description for the brand page.
Canonical Url	Allows you to define the default cross-domain canonical URL.
Robots	This directive controls page visibility by search engines' crawlers. There are four available variants: **NOINDEX, NOFOLLOW**, **NOINDEX, FOLLOW**, **INDEX, NOFOLLOW**, **INDEX FOLLOW**.

Back to Top

Banner

Option	Description
Banner Alt	Defines alternative text for the banner image. If the field is empty, the value will be created automatically from the Brand field.
Banner Title	Defines banner title. If the field is empty, the value will be created automatically from the Brand field.
Banner Image	Defines banner image. The permitted file types: png, gif, jpg, jpeg.
Banner position	Defines where the banner will be displayed on the page. There are three available options: **After title position**, **Before description position**, **After description position**.

Back to Top

Banner slider

Option	Description
Show in Brand Slider	Defines whether banner will be displayed in the slider or not.
Slider Position	Defines the position of the brand in the slider. The allowed range is 0 - 99.

Back to Top

Products of this brand

The grid with products assigned to the current brand.
This section also provides you with the ability to quickly add products to the current brand by clicking the **Add products** button. After clicking the button **Add products** the aside block will be shown with the products. After selecting products click the **Add Selected Products** button and those products will be added to the

current brand.

Back to Top

HYVA customizations

This section describes additional manual customizations for HYVA-based theme templates in regards to achieving the full compatibility of all features provided by the Mirasvit Layered Navigation extension

Product Attribute Linking

In case you'd like to use the **Product Attribute Linking** feature in your HYVA theme you need to modify the template file **Magento_Catalog/templates/product/view/product-info.phtml** in your theme.

```
<div id="product-details">
    <?php foreach ($block->getAttributes() as $attributeConfig) {
        $attribute = $attributesViewModel->getAttributeFromLayoutConfig($attributeConfig); ?>
        <?php if ($value = $attribute['value'] ?? null) { ?>
            <div class="flex border-t border-gray-300 py-2 last:mb-6 last:border-b <?=/* @noEscape */
                                                                                    $attribute['value'] ?: "" ?>">
                <span class="w-1/2 text-left text-gray-700 product-detail-label">
                    <?= $escaper->escapeHtml($attribute['label']) ?>
                </span>
                <span class="w-1/2 ml-2 text-left text-gray-900 product-detail-value">
                    <?= $escaper->escapeHtml($value) ?>
                </span>
            </div>
        <?php } ?>
    <?php } ?>
</div>
```

In this template file find the `<div id="product-details">` element
Remove part `<?=/* @noEscape */ $attribute['value'] ?: "" ?>`
Replace line `<?= $escaper->escapeHtml($value) ?>` with `<?= $value ?>`

```
<div id="product-details">
    <?php foreach ($block->getAttributes() as $attributeConfig) {
        $attribute = $attributesViewModel->getAttributeFromLayoutConfig($attributeConfig); ?>
        <?php if ($value = $attribute['value'] ?? null) { ?>
            <div class="flex border-t border-gray-300 py-2 last:mb-6 last:border-b">
                <span class="w-1/2 text-left text-gray-700 product-detail-label">
                    <?= $escaper->escapeHtml($attribute['label']) ?>
                </span>
                <span class="w-1/2 ml-2 text-left text-gray-900 product-detail-value">
                    <?= $value ?>
                </span>
            </div>
        <?php } ?>
    <?php } ?>
</div>
```

Note

Replacing `<?= $escaper->escapeHtml($value) ?>` with `<?= $escaper->escapeHtml($value, ['a']) ?>` is not recommended as `$escaper->escapeHtml()` will remove all attributes from the `<a>` tag except the `href` attribute.

Troubleshooting

This section describes the most common problems that customers report and how they can be resolved:

- **Filter is not visible on some category pages**
- **Price filter shows a single price range option**

The filter is not visible on some category pages, while it remains visible on others

Description

For example, you have discovered that the color filter is visible on some category pages and not visible on others.

Explanation

Should it occur that a specific category's filter consist of a single option and filtering by this option does not reduce this category's quantity of products (*not sure if message has changed*), then our module skips such filters because they serve no purpose.

Example
E.g., your category page contains 14 products. All of the products are white, so displaying a color filter with the single option "white" makes no sense because it does not narrow down the quantity of visible products.

The Price filter shows a single price range option

Solution

Magento allows you to configure the **price step** setting on the category and system levels.

Therefore, if the price filter shows a single range only for a specific category, navigate to that category settings in the **Catalog** > **Categories** section, open the tab **Display Settings**, and verify the field **Layered Navigation Price Step**.

If all categories display a single price range, then you should check the system level **price step** settings:

1. On the **Admin** sidebar, tap **Stores**. Then under **Settings**, choose **Configuration**.
2. In the panel on the left under **Catalog**, choose **Catalog**.
3. Expand the **Layered Navigation**. Now you can verify and adjust the price settings if needed.

Useful Info

For more information about price navigation, refer to the official Magento 2 documentation.

How to upgrade extension

To upgrade the extension, take the following steps:

1. Back up your store's database and web directory.
2. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.
3. Run the command below to update the current extension with all dependencies:

```
composer require mirasvit/module-seo-filter:* mirasvit/module-navigatio
```

Note

If you have the Hyva, run:

```
composer require mirasvit/module-seo-filter:* mirasvit/module-navigatio
```

Note

In some cases, the command above is not applicable, or you are unable to update just the current module, meaning you need to upgrade all Mirasvit modules in a bundle. In this case, the command above will have no effect.

Instead, run the `composer update mirasvit/*` command. It will update all Mirasvit modules which are installed in your store.

4. Run the below command to re-enable the extension:

```
php -f bin/magento module:enable Mirasvit_Core Mirasvit_SeoFilter Miras
```

Note

If you have the Hyva, run:

```
php -f bin/magento module:enable Mirasvit_Core Mirasvit_SeoFilter Miras
```

Note

If you are using Magento LiveSearch, additionally run:

```
php -f bin/magento module:enable Mirasvit_LayeredNavigationLiveSearch
```

5. Run the command below to install the updates:

```
php -f bin/magento setup:upgrade
```

6. Run the command below to clean the cache:

```
php -f bin/magento cache:clean
```

7. Deploy the static view files

```
rm -rf pub/static/*; rm -rf var/view_preprocessed/*;
php -f bin/magento setup:static-content:deploy
```

Disabling the Extension

Temporarily Disable

To temporarily disable the extension, please take the following steps:

1. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.
2. Run the command below to disable the extension:

```
php -f bin/magento module:disable Mirasvit_LayeredNavigation Mirasvit_S
```

Note

If you have the Hyva, run:

```
php -f bin/magento module:disable Mirasvit_LayeredNavigation Mirasvit_S
```

Note

If you are using Magento LiveSearch, additionally run:

```
php -f bin/magento module:disable Mirasvit_LayeredNavigationLiveSearch
```

3. Log in to the Magento backend and refresh the store cache (if enabled). Then deploy the static view files.

Extension Removal

To uninstall the extension, please take the following steps:

1. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.
2. Run the command below to remove the extension:

```
composer remove mirasvit/module-navigation mirasvit/module-seo-filter
```

Note

If you have the Hyva, run:

```
composer remove mirasvit/module-navigation mirasvit/module-seo-filter m
```

3. Log in to the Magento backend and refresh the store cache (if enabled). Then deploy the static view files.

2.9.38

(2026-04-01)

Fixed

- When "Clear Filter Position" is set to "Horizontal", the active filters bar now correctly appears in the horizontal area during Ajax navigation

---

2.9.37

(2026-03-26)

Improvements

- Added the ability to change sort direction for the "Sort Options By" attribute setting

---

2.9.36

(2026-03-26)

Fixed

- leftnavUpdate failing to replace filter block in custom themes without standard `.sidebar.sidebar-main` layout

---

2.9.35

(2026-03-23)

Improvements

- Added the ability to add brand name before product name in related, upsell, and cross-sell blocks

Fixed

- Prevented double localStorage toggle for collapsible filter state when only one filter remains on the page

- Fixed incorrect behavior of swatch filters in "By Button Click" mode when the same filter appears in both the sidebar and horizontal bar

---

2.9.34

(2026-03-13)

Fixed

- Fixed Clear Filter block not appearing in Ajax mode when only horizontal filters are configured
- Fixed "ValueError: min() Argument #1 ($value) must contain at least one element" error
- Fixed brand module issue when the Magento setting "Use Flat Catalog Product" is enabled

---

2.9.33

(2026-03-05)

Improvements

- Added new "Label (naturally)" option to the "Sort Options by" attribute setting, allowing natural alphabetical sorting of filter options

---

2.9.32

(2026-03-03)

Fixed

- Fixed error "AddBrandNamePlugin::afterProductAttribute(): Argument #2 ($result) must be of type string, null given" on products without a brand assigned

---

2.9.31

(2026-02-26)

Improvements

- Added the ability to display brand name before the product name on product listing pages

Fixed

- Fixed Quick Navigation settings not saving correctly at the store view level

---

2.9.30

(2026-02-18)

Fixed

- Fixed "Column min_price in where clause is ambiguous" error on category pages when price sorting (Mirasvit_Sorting module) and "Use price including tax" are both enabled
- Fixed duplicate item ID error on Grouped Options grid page

2.9.29

(2026-02-11)

Fixed

- Fixed incorrect behavior of grouped options when attribute setting "Use in Layered Navigation" is set to "Filterable (no results)"

2.9.28

(2026-01-22)

Fixed

- Fixed brand banner not displaying on brand pages

2.9.27

(2026-01-16)

Improvements

- Added the ability to show brand name as a clickable link before the product title on the product page

Fixed

- Fixed issue with "Show Not Configured Brands" setting not working correctly
- Added validation for "Group Code" field in Grouped Options to prevent invalid entries

---

2.9.26

(2025-12-29)

Fixed

- Fixed swatches not activating on product listing when SeoFilter module is enabled

---

2.9.25

(2025-12-17)

Improvements

- Improved performance by adding in-memory caching to reduce redundant database queries on category pages

Fixed

- Fixed horizontal bar filter position check causing repeated database queries on category pages with many filterable attributes
- Fixed grouped option selection on product listing for swatch attributes

---

2.9.24

(2025-12-01)

Fixed

- Fixed toolbar actions (sorting, view mode) not working when "Remember Category Pagination" setting is enabled

---

2.9.23

(2025-11-27)

Fixed

- Fixed pagination causing full page reloads when "Pagination Style" is set to "Disabled"

2.9.22

(2025-11-25)

Improvements

- Increased category facet aggregation limit to 3000 to support stores with large category trees

---

2.9.21

(2025-11-18)

Fixed

- Fixed Rating Filter not working correctly when Ajax mode is enabled
- Fixed "number_format_exception" Elasticsearch error when entering an invalid filter value
- Fixed attribute config "Categories" setting not applying correctly

---

2.9.20

(2025-11-11)

Fixed

- Fixed attribute config setting "Categories Visibility Mode" not working as expected

---

2.9.19

(2025-11-05)

Improvements

- Added store-level support for Brand Page URL key, allowing different URL keys per store view
- Added a setting to control the minimum number of brand products required to display the "More From Brand" block
- Replaced the standard multi-select with a visual category tree for the "Categories" field in attribute config editing

Fixed

- Fixed CSP (Content Security Policy) compatibility issues
- Fixed filtering by attribute and title fields in the Grouped Options grid

---

2.9.18

(2025-10-16)

Fixed

- Fixed the Apply button appearing in an incorrect position
- Fixed Filters Manager not scrolling to the form header when the edit button is clicked
- Improved attribute position saving performance in Filters Manager

---

2.9.17

(2025-10-02)

Fixed

- Fixed incorrect admin Ajax URL generation for Filters Manager when "Add Secret Key to URLs" setting is enabled

---

2.9.16

(2025-09-30)

Features

- **Filters Manager** — a new visual interface to manage filter positions, configure display settings, and reorder filters across sidebar and horizontal bar directly from the admin panel

---

2.9.15

(2025-09-26)

Improvements

- Optimized brand logo retrieval on product pages by using direct attribute value lookup instead of loading the full product model

---

2.9.14

(2025-09-22)

Improvements

- Added configurable page title to the All Brands page

Fixed

- Fixed Brand Page edit form not saving correctly in some cases
- Fixed Apply button label not switching between singular/plural form based on product count
- Fixed "Load More" button on Magento 2.4.7+ when "Remember Category Pagination" setting is enabled

---

2.9.13

(2025-09-16)

Fixed

- Fixed Apply button showing in instant mode when "Apply Filters by Button Click on Mobile" setting is enabled
- Applied SEO-friendly URL support for all numeric slider filters

---

2.9.12

(2025-09-08)

Fixed

- Improved meta title fallback logic for brand pages when custom meta title is not set
- Fixed "Show More/Less" toggle text not translatable and not responding to clicks in some cases

---

2.9.11

(2025-08-21)

Fixed

- Fixed compatibility with Mirasvit_CacheWarmer "Forbid cache flushing" setting to ensure data consistency during Ajax pagination

---

2.9.10

(2025-08-19)

Improvements

- Added mass delete action to the Brand Pages admin grid
- Added "Product Count" column to the Brand Pages admin grid

Fixed

- Increased brand attribute aggregation size from 500 to 3000 to ensure all brand options appear in search facets
- Fixed WYSIWYG field labels missing on brand edit page when Page Builder is globally disabled

---

2.9.9

(2025-08-12)

Improvements

- Changed brand short description field from plain textarea to WYSIWYG editor for rich text formatting

---

2.9.8

(2025-08-11)

Improvements

- Added Store Switcher support for brand edit page, allowing per-store brand content management

Fixed

- Fixed collapsible filter behavior for horizontal filters
- Fixed checkbox styles in filter options

2.9.7

(2025-08-04)

Fixed

- Fixed error on product page when brand attribute is not selected for the product

---

2.9.6

(2025-08-04)

Improvements

- Added ability to hide the "No" option in the "On Sale" filter

---

2.9.5

(2025-07-30)

Improvements

- Added swipe support for Quick Navigation on mobile devices

Fixed

- Fixed compatibility issue with WYSIWYG editor when Page Builder is disabled in Magento settings
- Optimized brand logo loading performance on product listing pages
- Fixed error in DecimalFilter when SEO Filter module is disabled
- Fixed incorrect rounding of boundary values for custom numeric filters in range mode

---

2.9.4

(2025-07-16)

Improvements

- Improved Quick Navigation module performance

Fixed

- Fixed Apply button remaining visible when all filters are collapsed

---

2.9.3

(2025-07-03)

Improvements

- Added configurable page scroll behavior after applying filters — choose between scrolling to top, staying at the current position, or scrolling to the filter area

---

2.9.2

(2025-06-24)

Improvements

- Added Value Template for decimal attributes in From-To display mode, allowing custom formatting of filter values

---

2.9.1

(2025-06-19)

Improvements

- Added option to conditionally show the search box in filters based on the number of available options

---

2.9.0

(2025-06-17)

Improvements

- Improved WCAG 2.2 AA compliance — fixed semantic HTML structure for filter lists, added proper ARIA labels, and improved accessibility of remove buttons
- Added option to display price slider values including taxes based on admin configuration

---

2.8.20

(2025-05-29)

Fixed

- Fixed brand logo preview not displaying on the Brands admin grid
- Fixed incorrect sorting order for grouped options
- Fixed the remove image button being unclickable when overlapped by the option image in attribute settings
- Fixed LiveSearch layered navigation synchronization issues

2.8.19

(2025-05-14)

Fixed

- Fixed some filter options not visible when "Hide Inactive Filter Options" setting is active

---

2.8.18

(2025-05-06)

Fixed

- Fixed filter alphabetical index compatibility with Hebrew characters

---

2.8.17

(2025-05-02)

Fixed

- Fixed "Show Brand Description" setting not visible in brand settings panel

---

2.8.16

(2025-04-30)

Fixed

- Fixed brand page routing issue causing incorrect URL resolution

---

2.8.15

(2025-04-29)

Improvements

- Added ability to use category-based links in the category filter instead of filter parameter URLs

---

2.8.14

(2025-04-25)

Improvements

- Added support for extra filters (Rating, On Sale, Stock, New) in GraphQL queries

Fixed

- Fixed filter expander compatibility with Blank-based themes

---

2.8.13

(2025-04-16)

Fixed

- Fixed attribute config cache not invalidating on attribute save, causing stale filter settings

---

2.8.12

(2025-04-10)

Fixed

- Fixed PHP 8.4 compatibility issues

2.8.11

(2025-04-08)

Improvements

- Added ability to customize SEO-friendly URLs for Grouped Options

---

2.8.10

(2025-04-07)

Improvements

- Added ability to hide the clear button and active options count badge for applied filters

Fixed

- Fixed price slider not working correctly with Arabic locale number formatting

---

2.8.9

(2025-03-31)

Improvements

- Added compatibility with new SEO Filter URL formats

Fixed

- Fixed "On Sale" and "New" filter option labels not being translatable

---

2.8.8

(2025-03-05)

Fixed

- Fixed some Brand Page settings not being configurable at the store view level

---

2.8.7

(2025-02-27)

Fixed

- Fixed "Filter Appearance" setting not available at the store view level

---

2.8.6

(2025-02-27)

Fixed

- Fixed search filter not working correctly in some configurations

---

2.8.5

(2025-02-25)

Fixed

- Fixed compatibility with Landing Page Redirect feature

2.8.4

(2025-02-07)

Fixed

- Fixed LiveSearch compatibility with Price Slider filter
- Fixed compatibility with Klevu_FrontendSearch module

2.8.3

(2025-01-27)

Improvements

- Added ability to set rel="nofollow" on links with multiple filters applied to improve SEO control

---

2.8.2

(2025-01-14)

Fixed

- Fixed price slider SEO-friendly URL not generating correctly
- Fixed file uploader compatibility on Magento 2.4.7

2.8.1

(2025-01-06)

Fixed

- Fixed product list view mode (grid/list) not switching on Magento 2.4.7

2.8.0

(2024-12-27)

Improvements

- Reorganized the admin settings menu for better navigation and discoverability of configuration options

---

2.7.39

(2024-12-24)

Fixed

- Fixed brand canonical link generating incorrectly when "Brand Page URL" is set to "Long URL"

2.7.38

(2024-12-23)

Fixed

- Fixed product list view mode not switching when "Remember Category Pagination" is enabled

---

2.7.37

(2024-12-17)

Fixed

- Added limit for filter combinations in Quick Navigation sequence to prevent excessive database growth
- Fixed horizontal filters not showing when category "Anchor" is set to "No"
- ?? Increased sequence field length to 512 in `mst_quick_navigation_sequence` table

2.7.36

(2024-12-13)

Improvements

- Added ability to select specific attributes for the Product Attribute Linking feature

Fixed

- Fixed horizontal filters not working correctly in confirmation (Apply button) mode

---

2.7.35

(2024-12-05)

Fixed

- Fixed Brand pages not working on Magento 2.4.3

2.7.34

(2024-11-26)

Fixed

- Fixed custom price filter alias not being applied correctly

---

2.7.33

(2024-11-21)

Improvements

- Added ability to sort filter options by product count

Fixed

- Fixed filtering by ID not working in the Brand Pages admin grid

---

2.7.32

(2024-11-13)

Features

- **Brands menu item** — display brands in the top navigation as a direct link or a popup with brand listing

Improvements

- Added multi-store support for Brand page URLs, generating correct links when switching store views

Fixed

- Fixed incorrect URLs when switching store views on brand pages

---

2.7.31

(2024-11-04)

Improvements

- Removed the deprecated "m-brand-seo-compatibility" plugin for cleaner brand SEO handling

---

2.7.30

(2024-10-30)

Improvements

- Improved Quick Navigation query performance

Fixed

- Added compatibility with Amasty SEO module
- Fixed Brand page routing issue

2.7.29

(2024-10-22)

Fixed

- Fixed alphabetical index not displaying correctly with Cyrillic characters
- Fixed compatibility with Lipscore review widget

2.7.28

(2024-10-02)

Improvements

- Added rel attributes to "Clear Filter" links for better SEO control

---

2.7.27

(2024-09-30)

Improvements

- Added automatic cleanup of old Quick Navigation sequences (filter combinations) via cron job
- Added SEO description field to brand page settings

Fixed

- Fixed input checkbox not responding to clicks in filter options

---

2.7.26

(2024-09-25)

Improvements

- Filter option count now displayed when label text exceeds sidebar width, keeping counts visible
- Added ability to precalculate filter option counts in "By Button Click" mode for faster filter updates

Fixed

- Fixed LiveSearch synchronization issue with layered navigation

---

2.7.25

(2024-09-19)

Fixed

- Fixed LiveSearch compatibility issue with layered navigation

---

2.7.24

(2024-09-19)

Fixed

- Fixed LiveSearch compatibility causing incorrect filter results
- Fixed scrollbar duplication in infinite scroll mode

2.7.23

(2024-09-13)

Features

- **Sticky Sidebar** — sidebar filters now stick to the viewport while scrolling for easier filter access on long pages

Improvements

- Replaced Font Awesome icon loaders with inline SVGs for faster loading and fewer external dependencies

Fixed

- Fixed brand URL suffix not applied correctly in some configurations

---

2.7.22

(2024-08-27)

Fixed

- Fixed backend validation error for attributes with "Input Validation for Store Owner" set to "Integer Number"
- Fixed Brand pages display mode not applying per store view

2.7.21

(2024-08-05)

Fixed

- Fixed horizontal filters not rendering correctly in some configurations

---

2.7.20

(2024-08-02)

Improvements

- Added ability to hide non-informative additional filters (Rating, Stock, On Sale) when they don't add value

---

2.7.19

(2024-07-12)

Fixed

- Fixed decimal filter not handling backend type correctly
- Fixed Stock Status filter not reflecting actual stock state

---

2.7.18

(2024-07-03)

Fixed

- Fixed grouped option images not displaying correctly

2.7.17

(2024-06-21)

Fixed

- Fixed brand logo plugin error on product pages without a brand assigned

---

2.7.16

(2024-06-20)

Features

- **Load More + Pagination** — new pagination mode combining the "Load More" button with standard page navigation for flexible product browsing

---

2.7.15

(2024-06-12)

Fixed

- Fixed multiselect AND logic returning incorrect results for some attribute combinations

---

2.7.14

(2024-06-12)

Fixed

- Fixed "All Products" page incorrectly appearing in widget layout update options

---

2.7.13

(2024-05-29)

Improvements

- Added Page Builder support for the Brand description field

Fixed

- Optimized filter label rendering performance

2.7.12

(2024-05-21)

Fixed

- Fixed price filter URL not generating correctly when URL prefix is used
- Fixed breadcrumbs error on product pages

2.7.11

(2024-04-23)

Fixed

- Fixed price slider not working on brand pages
- Fixed attribute config editing form not saving correctly
- Added database index to `mst_quick_navigation_sequence` table for improved query performance
- Fixed Attribute Linking feature causing errors in some cases

---

2.7.10

(2024-04-04)

Improvements

- Brand URL keys are now automatically converted to lowercase for consistency

Fixed

- Fixed indexer performance issue on Magento Commerce when LiveSearch module is disabled

---

2.7.9

(2024-03-26)

Improvements

- Reduced the number of database queries to `mst_navigation_grouped_option` table for better performance

---

2.7.8

(2024-03-21)

Fixed

- Fixed scroll step calculation for Quick Navigation slider not matching the visible area

---

2.7.7

(2024-03-13)

Improvements

- Added option to disable automatic scroll-to-top when a filter is applied

---

2.7.6

(2024-03-05)

Fixed

- Fixed search box not appearing in filters for attributes with text swatch type
- Fixed price filter in slider mode not working on landing pages

---

2.7.5

(2024-02-27)

Fixed

- Fixed sorting order of swatch-type filter options
- Optimized attribute config retrieval for better page load performance

---

2.7.4

(2024-02-21)

Improvements

- Optimized Brand module routing for faster page resolution

2.7.3

(2024-02-19)

Fixed

- Fixed category filter not working correctly with LiveSearch enabled

---

2.7.2

(2024-02-02)

Fixed

- Fixed not-configured brands incorrectly displaying on brand listing pages

---

2.7.1

(2024-01-31)

Fixed

- Fixed brand page returning 404 when URL is not valid instead of graceful fallback
- Improved attribute caching for better performance

2.7.0

(2024-01-29)

Features

- **Landing Pages** — create custom landing pages with pre-configured filter combinations and unique URLs

Fixed

- Fixed filter expander not toggling correctly
- Fixed Brand page visibility not respecting store view settings
- Fixed brand attribute scope label displaying incorrectly
- Fixed Search filter compatibility with Mirasvit_SeoFilter module

---

2.6.17

(2024-01-29)

Fixed

- Fixed filter expander issue

- Fixed Brand Page visibility not respecting store view settings
- Fixed brand attribute scope label

2.6.16

(2023-12-26)

Fixed

- Fixed Brand pages not working on Magento 2.4.3

2.6.15

(2023-12-21)

Features

- **Brand SEO data per store view** — configure unique SEO meta data for each brand page on a per-store basis

Improvements

- Added ability to hide filter options that have no matching products

Fixed

- ?? Changed `config` field type from `text` to `mediumtext` in `mst_navigation_attribute_config` table to support larger configurations

---

2.6.14

(2023-12-06)

Features

- Added ability to link to the brand page from the Product Attribute Linking block

Improvements

- Page now scrolls to top automatically when a filter is applied

Fixed

- Fixed price filter input auto-zooming on iPhone
- Fixed brand title not displaying correctly on the All Brands page

---

2.6.13

(2023-11-22)

Fixed

- Fixed Stock Filter disappearing after being applied
- Fixed sorting not working in the Brands admin grid
- Fixed duplicate options appearing in the category filter

2.6.12

(2023-10-27)

Fixed

- Fixed brand store-specific label not displaying on the All Brands page
- Fixed filters not working in the Brand Pages admin grid
- Added TrustPilot and Yotpo widget compatibility with brand pages

---

2.6.11

(2023-10-20)

Improvements

- Improved Quick Navigation rendering performance

Fixed

- Fixed slider filter not being draggable on mobile devices

2.6.10

(2023-10-10)

Fixed

- Fixed URLs with slash suffix generating incorrectly

2.6.9

(2023-10-09)

Fixed

- Fixed Apply button position overlapping content on mobile devices

---

2.6.8

(2023-10-09)

Fixed

- Fixed jQuery UI mouse compatibility issue causing slider interaction problems

---

2.6.7

(2023-10-09)

Fixed

- Fixed error when labels of "On Sale" and "Search" filters are empty
- Fixed category search compatibility with Mirasvit Search Ultimate

---

2.6.5

(2023-08-04)

Fixed

- Fixed meta data not generating for brand pages without custom configuration

---

2.6.4

(2023-08-02)

Fixed

- Fixed Apply button not hiding on mobile after filters are applied

---

2.6.3

(2023-08-01)

Fixed

- Fixed product wishlist button missing on brand pages

2.6.2

(2023-07-20)

Fixed

- Fixed nested categories still showing when "Show Nested Categories" is set to "No"

2.6.1

(2023-07-05)

Fixed

- Fixed errors on storefront pages with brand slider when a brand attribute option is deleted but its brand page still exists

---

2.6.0

(2023-06-29)

Fixed

- Fixed Brand pages and All Products page not working in Magento Commerce with Magento_LiveSearch

---

2.5.8

(2023-06-26)

Improvements

- Added ability to hide assigned products grid in the Brand Page edit form for faster loading

---

2.5.6

(2023-06-13)

Fixed

- Fixed price filter rendering in range mode

2.5.5

(2023-06-07)

Fixed

- Fixed Brand edit page error on PHP 8.2

2.5.4

(2023-06-05)

Fixed

- Fixed stock filter generating incorrect data during reindex in multi-store setups

---

2.5.3

(2023-05-31)

Fixed

- Fixed category filter still displaying when multiselect is disabled and a category is already selected

---

2.5.2

(2023-05-29)

Fixed

- Fixed memory exhaustion during reindex with Magento_LiveSearch
- Fixed incorrect product count in category filter

2.5.1

(2023-05-15)

Improvements

- Category filter no longer displays options without matching products when "Show Nested Categories" and search box are enabled
- Improved category tree display with proper indentation and hierarchy
- Added search suggestions for nested categories in the category filter
- Category filter is now collapsible for cleaner navigation on large category trees

---

2.5.0

(2023-05-09)

Features

- **Brand page display modes** — choose between "Products Only", "Static Block Only", or "Static Block and Products" display modes for brand pages, similar to category pages

---

2.4.9

(2023-05-08)

Fixed

- Fixed error on product page related to brand module in some edge cases

---

2.4.8

(2023-04-27)

Fixed

- Fixed unnecessary redirects caused by the Attribute Linking feature

---

2.4.7

(2023-04-26)

Fixed

- Fixed sorting order not changing on search results page in Ajax mode

---

2.4.6

(2023-04-20)

Fixed

- Fixed inability to upload SVG images for Brand pages

2.4.5

(2023-04-13)

Fixed

- Fixed error on product page caused by the Attribute Linking feature

2.4.4

(2023-04-11)

Fixed

- Fixed Attribute Linking feature causing errors on product pages
- Fixed stock filter not updating after changing product stock status in multi-stock setups

---

2.4.3

(2023-04-07)

Fixed

- Fixed position saving for Grouped Options
- Fixed multiselect AND logic compatibility with Magento_OpenSearch
- Fixed browser caching of Ajax responses causing stale filter results

---

2.4.2

(2023-04-06)

Improvements

- Added ability to configure brand page title, description, and short description separately for each store view

---

2.4.1

(2023-03-31)

Fixed

- Fixed "Warning: Undefined array key 'filter'" error in GraphQL queries
- Fixed conflict between custom attributes and additional filters

---

2.4.0

(2023-03-29)

Fixed

- Fixed PHP 8.2 compatibility issues

2.3.9

(2023-03-22)

Fixed

- Fixed Search filter displaying on AMP pages where it cannot function — Search filter is now automatically hidden on AMP pages

---

2.3.8

(2023-03-16)

Fixed

- Fixed Ajax scroll loader not working in infinity scroll mode

---

2.3.7

(2023-03-13)

Fixed

- Fixed products not being added to cart after Ajax filter calls

---

2.3.6

(2023-03-13)

Features

- **Separate filter modes for desktop and mobile** — use instant filter application on desktop while showing an Apply button on mobile for a better touch experience

---

2.3.5

(2023-03-07)

Fixed

- Fixed slider filters not applying correctly in "By Button Click" (confirmation) mode

---

2.3.4

(2023-03-07)

Fixed

- Fixed product order difference between normal page load and Ajax response in some cases

---

2.3.3

(2023-02-23)

Fixed

- Fixed slider filter not working when Mirasvit_SeoFilter module is enabled and the filter has a custom alias

---

2.3.2

(2023-02-22)

Improvements

- Added ability to assign products to a brand directly from the Brand Page edit form
- Added ability to create a new brand (attribute option) from the Brand Page edit form

Fixed

- Fixed Ajax scroll not working with some custom themes

2.3.1

(2023-02-20)

Fixed

- Fixed error when filtering by category on search results with "Display Out of Stock Products" enabled (Magento 2.4.5)

2.3.0

(2023-01-26)

Fixed

- Fixed error on search results page after filtering by category with "Display Out of Stock Products" enabled (Magento 2.4.5)

2.2.37

(2023-01-11)

Fixed

- Fixed not all categories appearing in attribute config "Categories Visibility Mode" settings

---

2.2.36

(2023-01-06)

Improvements

- Improved filter options visual styling for better readability

---

2.2.35

(2023-01-04)

Fixed

- Fixed price filter range not clearing correctly when removed

---

2.2.34

(2022-12-30)

Fixed

- Fixed price filter not applying correctly in range mode

2.2.33

(2022-12-29)

Fixed

- Fixed JavaScript error "filterOptions.closest(...) is null" in browser console

---

2.2.32

(2022-12-09)

Fixed

- Fixed pagination not working on search results with Mirasvit Search Ultimate when horizontal filters are present

---

2.2.31

(2022-12-08)

Fixed

- Fixed "Show Opened Filters" setting not being respected

2.2.30

(2022-11-24)

Improvements

- Added translation support for filter-related strings

Fixed

- Fixed custom swatches not rendering correctly

2.2.29

(2022-11-03)

Fixed

- Fixed alphabetical index displaying multiple times across different filters

---

2.2.28

(2022-11-02)

Features

- **Alphabetical index for filter options** — quickly jump to filter options by letter, useful for filters with many options

---

2.2.27

(2022-10-21)

Features

- **Clear link per filter** — added a clear link for each filter group to remove all selected options for that attribute at once

---

2.2.26

(2022-10-20)

Features

- **Product Attribute Linking** — display related attribute values (e.g., available sizes and colors) as clickable links on product pages

Improvements

- Added checked filter options counter badge and persistent opened/collapsed filter state

Fixed

- Fixed insecure HTTP URLs for brands in sitemap when using Mirasvit_SeoSitemap module

---

2.2.25

(2022-09-29)

Improvements

- Improved category filter build performance

Fixed

- Fixed PHP 8.1 compatibility issue

2.2.24

(2022-09-27)

Improvements

- Added ability to set a custom step value for slider filters

---

2.2.23

(2022-09-21)

Fixed

- Fixed price slider compatibility with Amasty_ElasticSearch
- Fixed Ajax scroll error "'unveil' is not a function"

2.2.22

(2022-09-14)

Fixed

- Fixed error when applying swatch filter on PHP 8.1

2.2.21

(2022-09-06)

Improvements

- Range filter now uses the actual maximum product price when max price is set to 0

Fixed

- Fixed error "Call to a member function getTooltip() on null"

2.2.20

(2022-09-05)

Fixed

- Fixed attribute tooltips not displaying in filter sidebar

2.2.19

(2022-09-02)

Features

- **Search filter** — customers can search for products directly from the filter sidebar

Fixed

- Fixed duplicated paging parameter in Ajax scroll calls

- Fixed unnecessary product collection loading when "More From Brand" feature is disabled

---

2.2.18

(2022-08-29)

Improvements

- Navigation toolbar now visible when JavaScript is disabled for basic functionality without JS

Fixed

- Fixed price filter not displayed in some multiselect configurations

---

2.2.17

(2022-08-10)

Improvements

- Added brand breadcrumbs on brand pages, All Products page, and product pages for better navigation
- Brand information is no longer shown on product listings and product pages for unconfigured or disabled brands

---

2.2.16

(2022-08-03)

Features

- **Per-attribute multiselect logic** — choose OR or AND logic for multiselect independently for each attribute

Fixed

- Fixed content not updating properly on Ajax scroll

2.2.15

(2022-08-02)

Improvements

- Horizontal filters automatically merge into the sidebar on mobile for better usability

Fixed

- Fixed error "Undefined offset 0" on the All Brands page when no brands are configured

---

2.2.14

(2022-07-27)

Fixed

- Fixed compilation error when Magento_LiveSearch interface is not available

---

2.2.13

(2022-07-27)

Features

- **Magento LiveSearch compatibility** — added Mirasvit_LayeredNavigationLiveSearch submodule for full integration with Magento LiveSearch

Improvements

- Improved Search filter appearance and usability

2.2.12

(2022-07-05)

Fixed

- Fixed error on search results page with Magento_LiveSearch

2.2.11

(2022-07-04)

Improvements

- Improved Quick Navigation rendering performance

Fixed

- Fixed PHP 8.1 compatibility issue

2.2.10

(2022-06-23)

Fixed

- Fixed "Show All Categories" setting not working for Brand and All Products pages

---

2.2.9

(2022-06-21)

Fixed

- Fixed duplicated products appearing when Load More button is clicked multiple times
- Fixed progress bar labels not updating correctly

2.2.8

(2022-06-20)

Improvements

- ?? Removed `db_schema_whitelist.json` — module now uses declarative schema exclusively

---

2.2.7

(2022-06-16)

Fixed

- Fixed filters applying immediately in "By Button Click" mode on Firefox

---

2.2.6

(2022-06-15)

Fixed

- Fixed scroll not working after switching product list view mode in Ajax mode

---

2.2.5

(2022-06-13)

Improvements

- Added translation support for brand descriptions and meta data

---

2.2.4

(2022-06-13)

Fixed

- Fixed duplicated Load More buttons and progress bar
- Fixed incorrect button label in "Infinity Scroll + Load More Button" mode

---

2.2.3

(2022-06-08)

Fixed

- Fixed brand slider images missing alt attributes for accessibility

---

2.2.2

(2022-06-01)

Fixed

- Fixed filter options not displaying correctly for Yes/No attributes

---

2.2.1

(2022-05-27)

Fixed

- Fixed price filter not applying in Ajax mode with ranges and "By Button Click" setting

---

2.2.0

(2022-05-25)

Improvements

- ?? Migrated to Magento declarative schema (`db_schema.xml`) — replaces install/upgrade scripts

---

2.1.34

(2022-05-20)

Fixed

- Fixed missing rel attribute on swatch filter links

2.1.33

(2022-05-17)

Fixed

- Fixed page reload in Ajax mode caused by "unveil is not a function" error

---

2.1.32

(2022-05-11)

Fixed

- Fixed product swatch images not displaying when custom navigation swatches are enabled

---

2.1.31

(2022-04-28)

Fixed

- Fixed unnecessary page reloads when navigating back
- Fixed progress bar not updating when changing "Products Per Page" value

---

2.1.30

(2022-04-27)

Features

- **Scroll progress bar** — shows browsing progress through product listing pages

Fixed

- Fixed Catalog Search reindex error when additional filters are enabled
- Fixed pages not reloading after clicking browser's back button in Ajax mode

- Fixed "Load More" button showing incorrect count on the last page
- Fixed "explode() expects parameter 2 to be string, int given" error
- Fixed price slider compatibility with Magento 2.4.4

2.1.29

(2022-04-15)

Fixed

- Fixed minor issue in Brand module routing

2.1.28

(2022-04-11)

Improvements

- Improved Brand router stability when SEO Filter is enabled

Fixed

- Fixed inability to save "Use Category URL Suffix" in Brand configuration
- Fixed All Brands page showing brands without products

2.1.27

(2022-04-06)

Fixed

- Fixed SEO-friendly range filter URL format generating incorrect URLs

---

2.1.26

(2022-03-28)

Fixed

- Fixed several small issues with Brand module

2.1.25

(2022-03-25)

Improvements

- Added PHP 8.1 support

2.1.24

(2022-03-21)

Fixed

- Fixed category tree not displaying correctly in the category filter
- Fixed swatch compatibility issues with some themes

2.1.23

(2022-03-09)

Fixed

- Fixed canonical URLs with URL suffix not generating correctly on Brand pages
- Fixed missing alt attributes on brand logo images
- Fixed All Brands page layout on mobile devices

2.1.22

(2022-02-23)

Fixed

- Fixed price slider displaying incorrect currency symbol

2.1.21

(2022-02-21)

Fixed

- Fixed only the first attribute showing in Quick Navigation
- Fixed navigation toolbar not updating when changing "Products Per Page" value
- Fixed Ajax mode "Apply by Button Click" not working correctly
- Fixed options in horizontal navigation not rendering properly
- Fixed incorrect Quick Navigation display

2.1.20

(2022-01-17)

Fixed

- Fixed "Hide brands with empty products collection" setting not working correctly

---

2.1.18

(2022-01-13)

Improvements

- Added option to hide brands without matching products from the brand listing

---

2.1.17

(2022-01-04)

Improvements

- Added currency symbol display in price slider filter
- Added RTL (right-to-left) support for Quick Navigation
- Added ability to use Brand pages in Magento widgets

2.1.16

(2021-12-15)

Fixed

- Fixed "Whole Width Image" checkbox reverting to unchecked after saving attribute settings
- Fixed filters not displaying when category "Anchor" option is set to "No"
- Fixed "Shop By" button not working correctly in Firefox

2.1.15

(2021-11-16)

Fixed

- Fixed incorrect positioning of grouped options
- Fixed slider filter error "Warning: strpos(): Empty needle"

2.1.14

(2021-11-03)

Fixed

- Fixed brand pages compatibility with Magento 2.4.3

2.1.13

(2021-11-02)

Fixed

- Fixed "More..." link not expanding filter options

2.1.12

(2021-10-29)

Improvements

- Added Ajax loading progress bar to show filter application status

---

2.1.11

(2021-10-28)

Fixed

- Fixed slider filter not responding to drag interactions

2.1.10

(2021-10-26)

Features

- **Attribute tooltips** — add short descriptions for each attribute in the layered navigation to help customers understand filter options

Fixed

- Fixed "More From Brand" block issue with Multi-Source Inventory (MSI)

2.1.9

(2021-08-31)

Improvements

- Price slider filter now returns 404 for invalid price ranges to prevent indexing of invalid URLs
- Filter item display mode now updates automatically when multiselect setting changes

---

2.1.8

(2021-08-19)

Features

- **Optional multiselect per attribute** — enable or disable multiselect independently for each filterable attribute

---

2.1.7

(2021-08-12)

Fixed

- Fixed type error in price slider data preparation
- Improved additional filters stability
- Fixed Magento 2.4.3 compatibility issues

2.1.6

(2021-07-20)

Features

- **Limit for opened filters** — set how many filters are expanded by default, keeping the sidebar clean

Fixed

- Fixed horizontal navigation styling issues
- Fixed swatch renderer loading all options instead of relevant ones
- Fixed Brand meta service error
- Fixed price slider showing incorrect faceted data

2.1.5

(2021-07-01)

Features

- **Additional pagination modes** — new options for product list pagination including Load More button and infinite scroll

Fixed

- Fixed duplicate canonical URLs on brand pages

2.1.4

(2021-06-17)

Fixed

- Fixed inability to disable search filter as fulltext search

---

2.1.3

(2021-06-14)

Fixed

- Fixed search filter layout issues with horizontal navigation
- Fixed missing custom swatch labels

2.1.2

(2021-06-09)
