

Layered Navigation Manual

Welcome to the Layered Navigation User Manual

Layered Navigation is a powerful yet simple extension, which allows you to build your own layered menu, making catalog navigation and filtering more convenient.

It replaces the standard Magento layered navigation widget, displayed on each category page, with a more complex one - allowing customers to dynamically combine filters and browse desired products more quickly.

Go ahead, dive in!

Firstly, please find our extension in the [My Downloadable Products](#) section of our store. Learn [how to install extension](#).

Proceed then with [Quick Start](#), which will guide you to build your very own custom layered navigation menu.

How to install the extension

1. Back up your store's database and web directory.
2. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.
3. Copy the installation instructions from the page [My Downloadable Products](#) to the SSH console and press ENTER.

4. Run the command below to enable the extension:

```
php -f bin/magento module:enable Mirasvit_Core Mirasvit_SeoFilter Mirasvit_...
```

5. Run the command below to install the extension:

```
php -f bin/magento setup:upgrade
```

6. Run the command below to clean the cache:

```
php -f bin/magento cache:clean
```

7. Deploy the static view files

```
rm -rf pub/static/*; rm -rf var/view_preprocessed/*;  
php -f bin/magento setup:static-content:deploy
```

Quick Start

Layered Navigation is a straightforward extension which replaces standard catalog filters immediately after installation. Basically, it's ready to work right out of the box.

However, there are certain elements which are worth your while to get tuned-up.

1. Layered Navigation needs to be seamlessly integrated to your theme. Visit the [General](#) and [Highlight](#) section of Configuration, and fit the layered navigation to your theme.

Note

Do not forget to clean cache **after applying any change**.

2. Review the attributes of your products, and set those that you wish to be [added to Layered Navigation](#) as **Filterable**.
3. Some attributes can have too many options to select. To optimize your navigation, use [Links Limit](#).
4. You may wish to make navigation more attractive by changing your selection of widgets to images. Use [Widget Override](#) feature for that.
5. Configure additional filters, such as **New Arrivals** or **On Stock** using the [Additional Filters](#) section of configuration.
6. You can also make links in Layered Navigation Widgets [more SEO-friendly](#), which will help web-crawlers index your store more effectively.

This should be a good start. Refer to corresponding sections of this manual to know more.

Layered Navigation Settings

This section describes most settings that you can use when configuring your layered navigation.

It is located in the **Stores -> Configuration -> Mirasvit Extensions -> Layered Navigation** section, and breaks into the following subsections which you can see at the sidebar:

Note

After changing of any option described below, navigate to **System -> Tools -> Cache Management** and **clear ALL cache** to apply the CSS changes which correspond to changed options.

General

This section contains the most basic options that define the behavior of Layered Navigation.

Option	Description
Enabled Ajax	Allows to update filters and catalog list via AJAX
Show Nested Categories	If enabled, extension will show nested (subcategories)

Option	Description
Enabled Multiselect	Allows you to select multiple filter options simultaneously, creating flexible and complex filters. Defines widget, which will be used for filter option selection. There are four available widgets: Default (used default widget, defined in your theme), Simple Checkbox , Checkbox , and Circle . These widgets will be used for all properties with enumerated values.
Display options	Note You can override this option and define custom icons for each enumerated value using Attribute Navigation Images .
Checkbox or circle background color	Displayed when Checkbox or Circle options are selected in the previous setting. Defines a background of the widget.
Checkbox or circle border color	Displayed when Checkbox or Circle options are selected in the Display options setting. Defines a border of the widget.
Checkbox or circle checked label color	Displayed when Checkbox or Circle options are selected in the master Display options setting. Defines a selection color of the widget.
Show Opened Filters	If this option is set to Yes , opened filters will be displayed at the top of the filtered product list.
Limit for opened filters	The number of filters which can be opened by default. For allowing all filters to be opened, leave this field empty. Active filters are always opened.

[Back to Top](#)

Highlight

Option	Description
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting

[Back to Top](#)

Links Limit

Option	Description
Display Mode	Defines how options will be displayed. There are three available widgets: Disabled (no limits) (widget used by default as defined in your theme), Scroll box , and Show/hide link .
Scroll height (px)	Displayed when Scroll box option is selected in the previous setting. Defines the height of the scroll box.
Links limit	Displayed when Show/hide link option is selected in the previous setting. Show only specified amount links for filters, integer value.
Less text	Displayed when a Show/hide link option is selected in the previous setting. Text which will be used as a button to collapse the filter to a limited quantity of options.
More text	Displayed when a Show/hide link option is selected in the previous setting. Text, which will be used as a button to expand the filter to the full quantity of options.

[Back to Top](#)

Additional Filters

This section has 5 additional filters provided by our extension: [New Products](#), [On Sale Stock](#), [Rating](#) and [Search Filter](#).

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.

If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

[Back to Top](#)

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at Stores -> Attributes -> Product . To become a filter, the attribute should be enumerable, and the option Use in Layered Navigation should be enabled in Storefront Properties . Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

[Back to Top](#)

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: Default (within sidebar) and Horizontal
Group options by attribute	Defines how selected filters should be grouped.

Additional Filters

This section has 5 additional filters provided by our extension: [New Products](#), [On Sale Stock](#), [Rating](#) and [Search Filter](#).

New Products

This shows only the new arrivals.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

On Sale

This shows products that are registered as "for sale" (e.g. with a discount).

Option	Description
Enabled	Allows using this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Stocks

This filter shows products that are in stock and can be bought.

Option	Description
Enabled	Allows this filter to be used in navigation
Label	Text label which will mark this filter at the navigation sidebar

Option	Description
In Stock Filter Label	Text which is used to mark products, available for shopping
Out of Stock Filter Label	Text which is used to mark products that are out of stock
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Rating

This filter shows the rating as calculated on a customer's review. It also utilizes a custom widget with stars.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter at the navigation sidebar
Position	Numerical position of this filter (0 is the top, 100 is the bottom)

Search Filter

This filter's behavior can be configured. Depending on the enabled options, it can work as a fulltext search on the current category page, as a filter for attribute options filters, or both.

If both options are disabled, the Search Filter won't be displayed even when enabled.

Option	Description
Enabled	Allows you to use this filter in navigation
Label	Text label which will mark this filter on the navigation sidebar
Fulltext Search	If enabled, the search field will work as a fulltext search inside the category page
Search by Attribute Options	If enabled, a pop-up block will be added with attributes and options that match the search query

[Back to Top](#)

Horizontal filters and Panel

This deals with displaying the filters which should be shown on the sidebar.

Option	Description
Select filters to show in horizontal navigation	Multi-selection option, which defines filters, eligible for navigation. They are defined at Stores -> Attributes -> Product . To become a filter, the attribute should be enumerable, and the option Use in Layered Navigation should be enabled in Storefront Properties . Horizontal filters will be hidden in vertical navigation. To Show Additional Filters (New, Sale, Stock, Rating), those particular filters should be enabled.
Hide horizontal filters if the screen size is less than (px)	Defines height, at which extension will shrink and hide horizontal filters.

[Back to Top](#)

Filter clear block

A clear block is a block where customer can cancel one or more filters.

Option	Description
Filter clear block position	Defines the position of that block. There are two options available: Default (within sidebar) and Horizontal
Group options by attribute	Defines how selected filters should be grouped.

Layered Navigation Settings

This section describes most settings that you can use when configuring your layered navigation.

It is located in the **Stores -> Configuration -> Mirasvit Extensions -> Layered Navigation** section, and breaks into the following subsections which you can see at the sidebar:

Note

After changing of any option described below, navigate to **System -> Tools -> Cache Management** and clear **ALL cache** to apply the CSS changes which correspond to changed options.

General

This section contains the most basic options that define the behavior of Layered Navigation.

Option	Description
Enabled Ajax	Allows to update filters and catalog list via AJAX
Show Nested Categories	If enabled, extension will show nested (subcategories)
Enabled Multiselect	Allows you to select multiple filter options simultaneously, creating flexible and complex filters. Defines widget, which will be used for filter option selection. There are four available widgets: Default (used default widget, defined in your theme), Simple Checkbox , Checkbox , and Circle . These widgets will be used for all properties with enumerated values.
Display options	Note You can override this option and define custom icons for each enumerated value using Attribute Navigation Images .
Checkbox or circle background color	Displayed when Checkbox or Circle options are selected in the previous setting. Defines a background of the widget.
Checkbox or circle border color	Displayed when Checkbox or Circle options are selected in the Display options setting. Defines a border of the widget.
Checkbox or circle checked label color	Displayed when Checkbox or Circle options are selected in the master Display options setting. Defines a selection color of the widget.
Show Opened Filters	If this option is set to Yes , opened filters will be displayed at the top of the filtered product list.
Limit for opened filters	The number of filters which can be opened by default. For allowing all filters to be opened, leave this field empty. Active filters are always opened.

[Back to Top](#)

Highlight

Option	Description
Enabled highlight for links	Enables options (filter links) highlighting
Highlight color	Defines a color for options (filter links) highlighting

Ajax Infinite Scroll

The scroll module provides you with the ability to activate the infinite scroll for traversing your catalog. It works in 2 modes:

1. **Automatic Infinite Scroll** automatically loads the next page when the user scrolls down to the bottom of the current page.
2. **Load More Button** triggers the next page load by hitting the **Load More** button.

General Settings

Go to **Stores > Configuration > Mirasvit Extensions > Scroll** section.

- **Scroll Mode** - defines, the mode used for loading next pages:
 - **Disabled** - disable scroll functionality.
 - **Infinite scroll**
 - **Load More Button**
 - **Infinite scroll + Load More Button**
 - **Load More Button + Infinite scroll**
- **Load Previous Page Button Label** - if a user opens your site by a direct link which loads the specific category page (using param "p=page_num"), our module shows the **Load Previous Page** button on top of the catalog to give the user the ability to see the previous pages.
- **Load Next Page Button Label** - label for **Load More** button.
- **Pages limit for the first pagination mode type** - set the number of pages which will be loaded by the first pagination mode type. Available only for **Infinite scroll + Load More Button** and **Load More Button + Infinite scroll** scroll modes.
- **Product List Selector** - our extension uses this selector as the starting point for the initialization of the scroll functionality. The Default Magento block which wraps products has the `.products.products-grid` or `.products.products-list` selector (depends on current view mode). However, if your theme uses a custom selector, you should specify it here.

Ajax Infinite Scroll

The scroll module provides you with the ability to activate the infinite scroll for traversing your catalog. It works in 2 modes:

1. **Automatic Infinite Scroll** automatically loads the next page when the user scrolls down to the bottom of the current page.
2. **Load More Button** triggers the next page load by hitting the **Load More** button.

General Settings

Go to **Stores > Configuration > Mirasvit Extensions > Scroll** section.

- **Scroll Mode** - defines, the mode used for loading next pages:
 - **Disabled** - disable scroll functionality.
 - **Infinite scroll**
 - **Load More Button**
 - **Infinite scroll + Load More Button**
 - **Load More Button + Infinite scroll**
- **Load Previous Page Button Label** - if a user opens your site by a direct link which loads the specific category page (using param "p=page_num"), our module shows the **Load Previous Page** button on top of the catalog to give the user the ability to see the previous pages.
- **Load Next Page Button Label** - label for **Load More** button.
- **Pages limit for the first pagination mode type** - set the number of pages which will be loaded by the first pagination mode type. Available only for **Infinite scroll + Load More Button** and **Load More Button + Infinite scroll** scroll modes.
- **Product List Selector** - our extension uses this selector as the starting point for the initialization of the scroll functionality. The Default Magento block which wraps products has the `.products.products-grid` or `.products.products-list` selector (depends on current view mode). However, if your theme uses a custom selector, you should specify it here.

Configuring Grouped Options

This part of the Layered Navigation extension provides you with the ability to combine attribute options into one filter for layered navigation.

It is located on the **Content -> Layered Navigation -> Grouped Options** page.

Grouped Options

0 records found

ID	Position	Title	Is Active	Attribute	Swatch	Options	Action
We couldn't find any records.							

To create a new group, press the **Add New Group** button and you'll be redirected to the Grouped Options creation page.

← Back

Save and Continue Edit

Save

General Information

Is Active Yes

Labels

Admin *

Default Store View

Group Code *

Position *

Swatch *

None

Attribute *

Select Attribute

Field	Description
Is Active	Enable/disable current Grouped Options.
Labels	Defines a label for Grouped Options for each store. If the label for a particular store has not been set, the admin area label will be used for that store.
Group Code	A key for current Grouped Options that will be used as a value of the attribute The code should be unique among all Grouped Options.
Position	The position of the filter in the navigation bar on the frontend.
Swatch	Choose the swatch type of the grouped option. There are 3 possible swatch types provided: - None; - Color; - Image; Swatch will be used for grouped options only if the original attribute options have them.
Color	Select the color for the current Grouped Options which will be displayed on the frontend. This field is visible only for the Color swatch type.
File	Upload the image that will be used on the frontend in the navigation bar. This field is only visible for Image swatch type.
Attribute	Select the attribute from the dropdown whose options you'd like to combine in one filter.
Options	Choose options from the selected attribute to combine in one filter. This field only visible after the attribute is selected.

Press the **Save** button to save Grouped Options.

Once Grouped Options is created and active, the options combined in it will be replaced in the navigation bar with one grouped option on each category page even if only one of the combined options is present there.

Product Attributes Navigation Options

Our extension uses **SEO Filters** for defining possible filters. That extension adds additional options to the product attributes, which are used for building Layered Navigation.

To adjust your attributes for navigation, visit **Stores -> Attributes -> Product** and select an attribute.

Basic Navigation Options

These are located at the **Storefront Properties** subsection, and are added to all attributes:

- **Use in Layered Navigation** - defines how current attributes should be used in Layered Navigation. There are three possible options:
 - **Filterable (with Results)** - defines which filter can be used in Navigation, and which results can be displayed and manipulated.
 - **Filterable (no Results)** - defines, that filter can be used in Navigation, but results can not be manipulated.
 - **No** - attribute can not be used for Navigation.
- **Use in Search Results Layered Navigation** - our extension features additional filters, which can be applied further to already filtered results and combined with them. If this option is set to **Yes**, then this attribute can be combined.

Note

This option applies only to enumerable properties, like **Dropdown**, **Multiple Select**, **Price**, and so on.

Overriding Filter Options Display

If a property is enumerable and has a defined set of values, the displaying of each value can be customized. It can be done via a special tab, added to such attributes, and named **Layered Navigation**.

For each possible value, there are four possible options:

- **Option** - name of possible value (**read-only** property).
- **Image** - is the image which should be used instead of widget, defined in the **Display options** setting in [General](#) section.
- **Change original menu text** - a label, which will be used instead of the default name, shown in **Option** field.
- **Whole width image** - defines whether the image should be displayed as is (**selected**), or shrunk to standard proportions (**deselected**).

By combining these definitions, you can completely override your filter display on the sidebar and create a more attractive appearance.

Manage Brand

This section describes how to create and edit brand pages.

To create a new brand page, go to the **Content -> Brands -> Brand Pages** section and press the button **Add Brand**. The brand page that will appear is divided into five sections:

General Information

Option	Description
Brand	Choose your brand. Should be defined in the Stores -> Configuration -> Mirasvit Extensions -> Brand -> General -> Brand Attribute .

Is Active | has the ability to enable / disable brand. URL key | Defines URL for your brand page. If the field is empty, the value will be created automatically. Logo | Defines image for the brand logo. The permitted file types: png, gif, jpg, jpeg, svg. Title | Defines brand title. If the field is empty, the value will be created automatically from the Brand field.

Description | Defines brand description. Visible in Store View | Defines where the brand page will be displayed.

[Back to Top](#)

Meta Data

Option	Description
Meta Title	Defines the meta title for the brand page.
Meta Keywords	Defines meta keywords for the brand page.
Meta Description	Defines the meta description for the brand page.

[Back to Top](#)

Banner

Option Description

Banner Alt | Defines alternative text for the banner image. If the field is empty, the value will be created automatically from the Brand field. Banner Title | Defines banner title. If the field is empty, the value will be created automatically from the Brand field. Banner Image | Defines banner image. The permitted file types: png, gif, jpg, jpeg. Banner position | Defines where the banner will be displayed on the page. There are three available options: **After title position, Before description position, After description position**.

[Back to Top](#)

Banner slider

Option	Description
Show in Brand Slider	Defines whether banner will be displayed in the slider or not.
Slider Position	Defines the position of the brand in the slider. The allowed range is 0 - 99.

[Back to Top](#)

Additional data

Option	Description
Robots	This directive controls page visibility by search engines' crawlers. There are four available variants: NOINDEX , NOFOLLOW , NOINDEX, FOLLOW , INDEX, NOFOLLOW , INDEX FOLLOW .
Canonical Url	Allows you to define the default cross-domain canonical URL.
Short Description	Defines a short description. It can be used in tooltip (STORES > Configuration > Brand > Brand Logo and Tooltip > Product List Brand Logo Tooltip).

[Back to Top](#)

Troubleshooting

This section describes the most common problems that customers report and how they can be resolved:

- [Filter is not visible on some category pages](#)
- [Price filter shows a single price range option](#)

The filter is not visible on some category pages, while it remains visible on others

Description

For example, you have discovered that the color filter is visible on some category pages and not visible on others.

Explanation

Should it occur that a specific category's filter consist of a single option and filtering by this option does not reduce this category's quantity of products (*not sure if message has changed*), then our module skips such filters because they serve no purpose.

Example

E.g., your category page contains 14 products. All of the products are white, so displaying a color filter with the single option "white" makes no sense because it does not narrow down the quantity of visible products.

The Price filter shows a single price range option

Solution

Magento allows you to configure the **price step** setting on the category and system levels.

Therefore, if the price filter shows a single range only for a specific category, navigate to that category

settings in the **Catalog > Categories** section, open the tab **Display Settings**, and verify the field **Layered Navigation Price Step**.

If all categories display a single price range, then you should check the system level **price step** settings:

1. On the **Admin** sidebar, tap **Stores**. Then under **Settings**, choose **Configuration**.
2. In the panel on the left under **Catalog**, choose **Catalog**.
3. Expand the **Layered Navigation**. Now you can verify and adjust the price settings if needed.

Useful Info

For more information about price navigation, refer to the official Magento 2 [documentation](#).

How to upgrade extension

To upgrade the extension, take the following steps:

1. Back up your store's database and web directory.
2. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.
3. Run the command below to update the current extension with all dependencies:

```
composer require mirasvit/module-seo-filter:* mirasvit/module-navigation
```

Note

In some cases, the command above is not applicable, or you are unable to update just the current module, meaning you need to upgrade all Mirasvit modules in a bundle. In this case, the command above will have no effect.

Instead run the `composer update mirasvit/*` command. It will update all Mirasvit modules which are installed in your store.

4. Run below command to re-enable extension:

```
php -f bin/magento module:enable Mirasvit_Core Mirasvit_SeoFilter Mirasvit_Navigation
```

5. Run the command below to install the updates:

```
php -f bin/magento setup:upgrade
```

6. Run the command below to clean the cache:

```
php -f bin/magento cache:clean
```

7. Deploy the static view files

```
rm -rf pub/static/*; rm -rf var/view_preprocessed/*;  
php -f bin/magento setup:static-content:deploy
```

Disabling the Extension

Temporarily Disable

To temporarily disable the extension, please take the following steps:

1. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.
2. Run the command below to disable the extension:

```
php -f bin/magento module:disable Mirasvit_LayeredNavigation Mirasvit_S
```

3. Log in to the Magento backend and refresh the store cache (if enabled). Then deploy the static view files.

Extension Removal

To uninstall the extension, please take the following steps:

1. Log in to the SSH console of your server and navigate to the root directory of the Magento 2 store.
2. Run the command below to remove the extension:

```
composer remove mirasvit/module-navigation mirasvit/module-seo-filter
```

3. Log in to the Magento backend and refresh the store cache (if enabled). Then deploy the static view files.

Change Log

2.1.11

(2021-10-28)

Fixed

- Fixed the issue with slider filter
-

2.1.10

(2021-10-26)

Improvements

- Ability to add tooltips with a short descriptions for each attribute in the layered navigation

Fixed

- more from brand MSI issue
-

2.1.9

(2021-08-31)
