Health Monitoring Suite Manual

Getting Started

Welcome to the **Stability Suite Documentation**. Whether you are a new or an advanced user, you can find some useful information here.

First of all we recommend to check the following link:

- [How to install extension](#)

How to install the extension

1. Backup your store's database and web directory.
2. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.
3. Copy the installation instructions from the page [My Downloadable Products](#) to the SSH console and press ENTER.
4. Run command `php -f bin/magento module:enable Mirasvit_Core Mirasvit_Stability Mirasvit_StabilityAlert Mirasvit_StabilityConflict Mirasvit_StabilityCron Mirasvit_StabilityError Mirasvit_StabilitySnapshot Mirasvit_StabilityTiming` to enable the extension.
5. Run command `php -f bin/magento setup:upgrade` to install the extension.
6. Run command `php -f bin/magento cache:clean` to clean the cache.

7. Deploy static view files

   ```
   rm -rf pub/static/*; rm -rf var/view_preprocessed/*; php -f
   bin/magento setup:static-content:deploy
   ```

8. Make sure that native magento cronjob is configured and working correctly. Extension perform all tasks in cron.

Command Line Interface

Usage: `php -f bin/magento [options]`

- `mirasvit:stability:manage --cron` - run cron jobs for this module only

How to upgrade extension

To upgrade the extension follow these steps:

1. Backup your store's database and web directory.
2. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.
3. Run command `composer require mirasvit/module-stability:* --update-with-dependencies` to update current extension with all dependencies.

   Note

   In some cases the command above is not applicable, it's not possible to update just current module, or you just need to upgrade all Mirasvit modules in a bundle. In this case command above will have no effect.

   Run instead `composer update mirasvit/*` command. It will update all Mirasvit modules, installed on your store.

4. Run command `php -f bin/magento module:enable Mirasvit_Core Mirasvit_Stability Mirasvit_StabilityAlert Mirasvit_StabilityConflict Mirasvit_StabilityCron Mirasvit_StabilityError Mirasvit_StabilitySnapshot Mirasvit_StabilityTiming` to enable the extension.
5. Run command `php -f bin/magento setup:upgrade` to install updates.
6. Run command `php -f bin/magento cache:clean` to clean the cache.

7. Deploy static view files

   ```
   rm -rf pub/static/*; rm -rf var/view_preprocessed/*; php -f
   bin/magento setup:static-content:deploy
   ```

Disabling the Extension

Temporarily Disable

To temporarily disable the extension please follow these steps:

1. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.
2. Run command `php -f bin/magento module:disable Mirasvit_Stability` to disable the extension.
3. Login in to the Magento back-end and refresh the store cache (if enabled).

Removing the Extension

To uninstall the extension please follow these steps:

1. Login to the SSH console of your server and navigate to the root directory of the Magento 2 store.
2. Run the command `composer remove mirasvit/module-stability` to remove the extension.
3. Login in to the Magento back-end and refresh the store cache (if enabled).

1.3.1

(2025-06-20)

Improvements

- Errors grid improved

1.3.0

(2025-06-06)

Improvements

- WCAG 2.2 AA compliance

Fixed

- Fixed the issue with knockout templates

1.2.7

(2025-04-10)

Fixed

- Compatibility with Magento 2.4.8

1.2.6

(2024-09-03)

Fixed

- Debug messages in Error logs

1.2.5

(2024-08-08)

Fixed

- Compatibility with Magento 2.4.7

1.2.4

(2023-01-25)

Improvements

- Added support of Magento 2.4.6

Fixed

- console command return value

1.2.3

(2022-06-20)

Improvements

- remove db_schema_whitelist.json

1.2.2

(2022-06-06)

Improvements

- Migrate to declarative schema

1.2.1

(2022-05-09)

Fixed

- PHP8.1 compatibility

1.2.0

(2022-03-14)

Fixed

- PHP 8.1 compatibility
- Magento versions support - 2.3, 2.4

1.1.0

(2021-05-24)

Fixed

- Fixed a possible issue with 'out of memory' error while loading the Performance page

---

1.0.9

(2020-12-15)

Fixed

- Fixed the issue with the var/stability folder overgrown in size when cron stopped working

---

1.0.8

(2020-09-08)

Improvements

- Support of Magento 2.4

1.0.7

(2020-07-30)

Improvements

- Support of Magento 2.4

1.0.6

(2020-03-17)

- Code improvements

1.0.5

(2020-01-14)

Improvements

- Confict detector

Fixed

- Issue with duplicated layout

1.0.4

(2019-10-15)

Improvements

- Cronjob

Fixed

- Compatibility with Magento 2.3.3
